INDEX TO VOL. XXI, RESEARCH BULLETINS 232-241

A

Agricultural Economics Subsection, bulletin from 353
Agricultural ladder 397
Alfalfa, germination of 291
Alfalfa, water content of 320
Water determinations of alfalfa analyzed for significance 323
Discussion of the small differences in water content of alfalfa lots 325

B

"Bacteriology of cheese III. Some factors affecting the ripening of Blue (Roquefort type) Cheese," by C. B. Lane and B. W. Hammer 193

Historical 202
Common defects of blue-veined cheeses 206
Flavor in blue-veined cheeses 205
General action of the penicillia 204
Manufacture of blue-veined cheeses 202
Preparation of mold powders for blue-veined cheeses 207
Penicillia important in ripening blue-veined cheeses 203

Literature cited 237
Methods 207
Chemical analysis of cheese 209
Acid value of fat 210
General types of volatile acids 209
Nitrogenous decomposition in cheese 210
Total volatile acidity 209
Examination and scoring of cheese 209
Manufacture of cheese 207
General manufacturing procedure 207
Source and treatment of milk 207
Preparation of mold powder 209
Results obtained 210
Effect of the strain of mold used 212
Inoculation of curd with mold powder 210
Addition of mold powder to curd before hooping 211
Effect of amount of mold powder used 210
Manufacture of blue cheese from homogenized milk 220
Commercial lots of cheese 223
Comparison of cows' milk and goats' milk for blue cheese 230
Effect of homogenization on the volatile acid development 225
Effect of delayed hooping 231
Effect of delayed salting 231
Effect of homogenization pressure 225
Effect of homogenization temperature 224
Effect of pasteurizing and homogenizing milk 226
Effect of not skewering the cheese 235
General action of milk lipase in ripening cheese 232
General effect of homogenization 221
Small units of cheese 236

Summary 197

Bacteriology Section, bulletin from 41

Bluegrass seed. See "Experiments with modified techniques for the determination of purity and viability of bluegrass seed" 89
Blue-veined cheese. See "Bacteriology of cheese III". 193
Botany and Plant Pathology Section, bulletin from 89, 241, 273
Brandt, A. E., author of "Tests of significance in reversal or switchback trials". 57
Brewer, C. R., joint author of "Effects of aeration under pressure on diacetyl production in butter cultures". 41
Britton, Virginia, joint author of "Iowa incomes as reported in income tax returns". 113
Butter cultures. See "Effect of aeration under pressure on diacetyl production in butter cultures."

C
Cheese, Blue. See "Bacteriology of cheese III". 193
Clover, germination of, red and sweet. 291
Field germination of impermeable seeds of alfalfa and red and sweet clover. 295
Samples containing high and low percentages of impermeable seed. 295
Selected impermeable seeds. 297
Germination of small legumes seeded in basic and acid soil. 302
General discussion of results with small seeded legumes. 308
Relation of seed quality to rate of seeding and field stand. 298
Clover lots, water content of red clover. 328

D
Dairy Industry Section, bulletin from 41, 193
Davis, G. N., joint author of "Indexing farmers' seed lots for seed-borne organisms and response to seed disinfectants". 241
Diacetyl production. See "Effect of aeration under pressure on diacetyl production in butter cultures". 43
Dry matter in clover and alfalfa. See "Significance and technique of dry matter determinations in yield tests of alfalfa and red clover". 317

E
"Effect of aeration under pressure on diacetyl production in butter cultures" by C. R. Brewer, C. H. Werkman, M. B. Michaelian and B. W. Hammer. 41
Methods and materials. 43
Apparatus. 45
Chemical methods. 44
Cultures. 44
Manufacture. 47
Experimental. 47
Part I. Investigations using one pressure vessel. 47
Part II. Investigations using three pressure vessels. 51
Part III. Use of butter cultures prepared with aeration and stirring under pressure. 54
Literature cited. 56
Erickson, E. L., joint author of "Laboratory tests of field crop seeds as indicators of their seeding value". 273
Erosion and farm indebtedness. 384
"Experiments with modified techniques for the determination of purity and viability of bluegrass seed," by R. H. Porter. 89
Discussion. 107
Experimental results. 95
Duration of germination tests with bluegrass seed. 107
Variations in germination of bluegrass seed and the effect of substrata. 103
Variations in sub-samples from many seed lots.......................... 95
Variations in two separate samples from large seed lots........... 102
Introduction ........................................................................... 93
Literature cited ........................................................................ 111
Materials and methods .......................................................... 94
Summary and conclusions ....................................................... 91

Farm Crops Subsection, bulletin from ................................. 89, 273, 313
Farm tenure, relation to land use and erosion.......................... 367
Federal income tax returns...................................................... 119
Federal income tax requirements............................................. 119
Iowa incomes, 1927-34 ......................................................... 122
Distribution of incomes.......................................................... 123
Statistical measures of income distribution............................ 124
Sources of income.................................................................... 126
Family status of those filing returns........................................ 127

Germination of red clover, alfalfa and sweet clover ............. 291
General discussion of results with small seeded legumes ....... 308
Germination of small seeded legumes in basic and acid soil . 302
Relation of seed quality to rate of seeding and field stand of red clover, alfalfa and sweet clover ..................... 295
Selected laboratory samples ................................................... 292
Field germination of impermeable seeds of red clover, alfalfa and sweet clover ............................................. 295
Samples containing high and low percentages of impermeable seeds ......................................................... 295
Selected impermeable seeds .................................................... 297
Germination of soybeans ......................................................... 284

Hammer, B. W., joint author of “Bacteriology of cheese” ....... 193
Hammer, B. W., joint author of “Effect of aeration under pressure on diacetyl production in butter cultures” ............. 41
Hendershott, W. E., joint author of “Indexing farmers’ seed lots for seed-borne organisms and response to seed disinfectants” 241
Himmel, John P., joint author of “Socio-economic phases of soil conservation in the Tarkio Creek area” .................... 353
Homogenized milk, manufacture of blue-veined cheese from 220
Humidity, its influence on chick embryo growth as determined by
  Dry weight of embryo as a measure of growth ...................... 20
  Total ash as a measure of growth ...................................... 20
  Total nitrogen as a measure of growth ............................. 20
  Wet weight of embryo as a measure of growth ................. 15
Hyland, Howard L., joint author of “The significance and tech-
  nique of dry matter determinations in yield tests of alfalfa and red clover” .................................................... 313

Incomes in selected sample ................................................... 139
  Average income .................................................................. 160
  Average income and population of town ............................. 160
  Distribution of income by occupation .................................. 160
  Distribution of income in various communities ................. 165
  Number of dependents by occupational groups ................. 169
Penquite, Robert, author of "Influence of temperature and humidity upon the growth of chick embryos in a mechanically ventilated incubator" ........................................... 1
Poultry Husbandry Subsection, bulletin from ...................................................... 1
Porter, R. H., author of "Experiments with modified techniques for the determination of purity and viability of bluegrass seed" ................................. 89
Porter, R. H., joint author of "Indexing farmers' seed lots for seed-borne organisms and response to seed disinfectants" ................................. 241
Porter, R. H., joint author of "Laboratory tests of field crop seeds as indicators of seeding value" .......................................................... 273

Reid, Margaret G., joint author of "Iowa Incomes as reported in income tax returns" .......................................................... 113
Roquetfort type cheese ...................................................................................... 193
Rural Social Science Section, bulletin from ......................................................... 113

Schickele, Rainer, joint author of "Socio-economic phases of soil conservation in the Tarkio Creek area" ........................................................ 353
Seed disinfectants. See "Indexing farmers seed lots for seed-borne organisms and response to seed disinfectants" ........................................... 245
Seeding value. See "Laboratory tests of field crop seeds as indicators of seeding value" .......................................................... 279
Significance and technique of dry matter determinations in yield tests of alfalfa and red clover," by F. S. Wilkins and Howard L. Hyland .......................................................... 313
Accuracy as affected by field technique ............................................................ 336
Accuracy as affected by delayed sampling of bunched forage ......................... 337
Accuracy as affected by delayed weighing of bagged forage ......................... 338
Accuracy as affected by swath exposure ........................................................... 336
Accuracy of dry matter determinations as affected by laboratory technique .......... 329
Dry matter determinations as affected by delayed drying ........................... 344
Dry matter determinations without use of artificial heat .............................. 341
Effect of containers, size of samples and drier temperatures on dry matter determinations .......................................................... 340
Effect of partial drying at 80° C. followed by drying at 25° C. on dry matter determinations .......................................................... 342
Loss of dry matter from stored samples after drying to 2.5 percent water ...... 345
General procedure ......................................................................................... 318
Literature cited ................................................................................................. 351
Number of samples ........................................................................................ 331
Number of alfalfa samples ............................................................................ 331
Number of red clover samples ..................................................................... 332
Oven versus drier determination ................................................................ 346
Size of samples ............................................................................................... 334
Size of alfalfa samples ................................................................................ 334
Size of red clover samples ........................................................................... 335
Summary ........................................................................................................ 315
Variations in water content at different times during the day .................... 339
Water absorption of forage after removal from drier and oven ................. 349
Water content of alfalfa and red clover lots ............................................... 319
Water content of alfalfa lots ........................................................................ 320
