Census 2010
Demographic Profile

Overview

This demographic profile describes characteristics of the local and state population based on results from the 2010 Census. The decennial census is an official enumeration, or count, of all residents on April 1st of the census year. The results of the census provide us with information about basic demographic characteristics of the population, including age, race, ethnicity, household composition, housing occupancy, and housing tenure.

Statewide Demographic Trends

Iowa’s official population count on April 1, 2010, was 3,046,355 residents. The state’s total population grew by 4.1 percent between 2000 and 2010, although the growth was unevenly distributed across the state. Two-thirds of Iowa’s 99 counties and 600 of its 947 incorporated cities experienced population losses for the decade.

Iowa’s population reflects a slightly older age distribution compared to a decade ago. The state’s median age has increased to 38.1 years compared to 36.6 years in 2000. Elderly residents, ages 65 years and older, now account for nearly 15 percent of the total population.

Children under the age of 18 years represent about 24 percent of the population.

The racial and ethnic composition of Iowa’s population reflects growing minority group shares. Residents who report any race other than white alone now comprise nearly 9 percent of Iowa’s population. Hispanic/Latino residents, who may be of any race, are now 5 percent of the total population.

The average size of an Iowa household in 2010 was 2.4 persons, only slightly smaller than the average in 2000.

The total number of housing units in Iowa grew by 8.4 percent from 2000 to 2010.
Total Population in 2010 and 2000

Adams County: 2010 2000 Change
Total population.......................... 4,029 4,482 (453)
In households.............................. 3,915 4,362 (447)
In group quarters.......................... 114 120 (6)
Institutionalized........................... 49 65 (16)
Noninstitutionalized..................... 65 55 10

State of Iowa............................. 3,046,355 2,926,324 120,031
United States............................ 308,745,538 281,421,906 27,323,632

Iowa’s population surpassed 3 million residents during the last decade, while the population of the United States topped 300 million residents. Iowa’s 4.1 percent rate of growth for the decade was less than half the national average rate.

Local Population Trend 1900-2010

Residents of correctional facilities, nursing homes, dormitories, and other types of group quarters are counted among the total population.
Population by Hispanic/Latino Origin and Race

The U.S. Census Bureau defines Hispanic or Latino origin as an ethnicity, not as a race. A person of Hispanic or Latino origin may be of any race, including white.

Change in Hispanic/Latino Percentage 2000-2010

- Adams County: 2010 2000
  - Hispanic/Latino: 16.3% 12.5%
  - White alone: 83.7% 63.7%
  - Black alone: 12.2% 8.7%
  - Asian alone: 4.7% 2.6%
  - Native Hawaiian/Pacific Islander alone: 1.9%
  - Other race alone: 1.9%
  - Two or more races: 1.4%
  - Not Hispanic/Latino: 100.0% 100.0%

The U.S. Census Bureau defines Hispanic or Latino origin as an ethnicity, not as a race. A person of Hispanic or Latino origin may be of any race, including white.
These population pyramids illustrate the percentage distribution of the population by 5-year age group and gender.

Note: The horizontal scale for this state chart may differ from that used for the local population distribution shown above.
Median Age of the Population by Sex

Median age describes the midpoint of the population distribution. Half of the population is younger than the median age and half of the population is older.

<table>

Growth in the number of housing units well outpaced the growth in total households during the last decade, both nationally and in Iowa. On average, the U.S. housing stock increased by 1.41 units per each new household. In Iowa, the ratio was 1.44 housing units per new household.
Other Sources for Detailed Census Data

The decennial census has traditionally been a rich source for socio-economic data far more detailed than the basic demographic characteristics presented in this report. The detailed information was collected via a “long form” survey that was administered to a sampled subset of the total population. The long form sample provided the basis for detailed portraits of income, educational attainment, employment, housing, and many other characteristics of the population in our communities.

The 2010 Census was the first since 1940 not to include the detailed long form data sample. The U.S. Census Bureau has replaced the long form sample with a new, rolling sample of U.S. households that is administered on a continuous basis rather than once every 10 years. This new survey, called the American Community Survey (ACS), will now serve as the primary source of socio-economic data for our neighborhoods, cities, and counties.

ACS data for all census geographies down to the block group level are currently available for the period covering 2005-2009. The next release of small-area ACS data will describe the 5-year period from 2006-2010.

Iowa State University will continue to release new reports based on future data releases from the 2010 Census, the ACS, and other Census data programs. Data may also be obtained directly via the World Wide Web from the U.S. Census Bureau and the State Data Center of Iowa.
