February of this year was a time not looked upon fondly by ISU student Brittney Wendling. A life-changing event occurred on this date when Wendling was diagnosed with Larsen Syndrome.

For those unfamiliar, Larsen Syndrome affects the development of bones in the body. It has left Wendling with dislocated joints and no knees. As a result, she is dependent on accessibility and will take place in the Town Engineering Building, room 206.

The event will outline the current level of campus accessibility and will take place in the Town Engineering Building, room 206.

A panel presentation about the use of assistance animals on campus will also be provided at 7 p.m. Tuesday in the Campus Recreational Center.

The week will kick off with the Sargent Scholarship and the Ames Area Chamber Leadership Scholarship Award Presentation on the lobby of the Student Services Building. It will take place at 4 p.m. on Monday.

Professor Arvid Osterberg and students in the ARCH 571: Design for All People class will give a presentation about the class in the Campanile Room of the Memorial Union. The presentation will take place at 4 p.m. Monday.

The week will conclude with the Sargent Scholarship and the Ames Area Chamber Leadership Scholarship Award Presentation on the lobby of the Student Services Building. It will take place at 4 p.m. on Monday.

A panel presentation about the use of assistance animals on campus will also be provided at 7 p.m. Tuesday in the Campus Recreational Center.

Two people stabbed in Campustown Saturday

By Danielle Gole @wastatedaily.com

Two individuals were stabbed early Saturday morning in Campustown. According to a press release from the Iowa State Police Department, Police arrived at the scene and found two male victims with stab wounds to their chest and abdomen area in the 200 block of States Ave. a little after 1 a.m., accoding to the release. The stabbing occurred during a physical altercation between two groups of males. Both suspects were later found and brought in for questioning.

Police are not currently releasing the names of the victims involved in the stabbing, but according to the release, they were transported to Mary Greeley Medical Center. The investigation is ongoing, however, no charges have been filed at this time.

Iowa State Police Department is asking anyone with more information on the stabbing to contact them at 515-294-5133 or the anonymous tip line at 515-239-5533.

Dandiya Night celebrates Navaratri
Indian Students’ Association hosts festival for all students

By Emily Clement

IOWA STATE DAILY
Monday, October 3, 2016

Students gathered Friday night in the Village Ballroom for the first night of celebrating Dandiya, dandiya raas and Dandiya Raas. Dandiya Night was hosted by the Indian Undergraduate and Graduate Association and is ‘dedicated to the worship of Godess Durga’. The festival challenged the traditional celebration of the beginning of autumn where in nature starts undergoing its fall patterns, according to the Art of Living.

“This festival is a celebration of dance that is performed during the festival that marks the end of the harvest season. The festival is unique in India.”

To those who haven’t worked here before, the interior of the Sloss House, which is located at the center of the Campus, is a bit intimidating. Entering through the entrance is like crossing the threshold to another time. To those who have, it’s a familiar space.

The Sloss House hosts the Margaret Sloss Women’s Center (MSWC). Despite being the oldest center at the University, the Sloss House has its doors open to anyone.

“That everything we do in the center, the Sloss House, is done for everyone,” said Dominique Lee, executive director of the MSWC. “It’s our job to make sure that everyone is welcome, everyone feels at home and everyone can feel comfortable here. If you’re hungry, you can eat here. If you need a place to talk, you can talk here. If you need a place to get support, you can get support here. If you need a place to be heard, you can be heard here. That’s what we do.”

The Sloss House has been in use since 1880, formerly houses the Margaret Sloss Women’s Center (MSWC). According to Lee, the Sloss House is a place where people can be accepted as who they are.

“We’re not on any mission to make people perfect. We’re not on any mission to fix people. We’re not on any mission to make people not what they are,” Lee said. “We’re here to listen and be there for people. We’re here to make people feel comfortable and we’re here to make people feel safe. We’re here to help people get their needs met.”

For new and returning students, the MSWC is a place to go for support and guidance. The center offers a wide range of services, from counseling to legal aid, and everything in between.

“Everything we do here is for everyone,” Lee said. “We’re here to make sure that everyone feels comfortable and that everyone feels welcome. We’re here to make sure that everyone feels safe. We’re here to make sure that everyone feels supported. We’re here to make sure that everyone feels listened to.”

The MSWC is open to everyone, regardless of gender, race, ethnicity, religion, sexual orientation, or any other factor.

“We’re here for everyone,” Lee said. “We’re here to make sure that everyone feels comfortable and that everyone feels welcome. We’re here to make sure that everyone feels safe. We’re here to make sure that everyone feels supported. We’re here to make sure that everyone feels listened to.”

Lee encourages anyone who is struggling to seek help from the MSWC.

“Please come to us, please come to us,” Lee said. “We’re here for everyone, we’re here for everyone.”

The MSWC is open Monday through Friday from 9 a.m. to 5 p.m. The center is located at 222 W. Iowa St., Suite 200, in the Sloss House.

To find out more about the Margaret Sloss Women’s Center, visit its Facebook page or Twitter account, @ISUWomensCenter.

The last time C02 levels tipped above the 400 ppm mark was mill-
ions of years ago. Ralph Keeling of the University of San Diego's Scripps Institution of Oceanography is the director of the National Oceanic and Atmospheric Admin-
istration's (NOAA) Carbon Dioxide Data Bu-
reau, which keeps track of CO2 levels. He likely will be having the planet will see levels below 400 ppm this year or in the future, according to U.S. News & World Report.

Simply put, having 400 ppm means that in a million pounds of air, there will be 400 pounds of carbon di-
oxide. NASA's chief climate scientist Ralph Keeling of the University of Colorado-Boulder's Austin Vitkovic, Whetstone said, “is truly an effort to bring co-
sciousness among the general population.

Since CO2 falls into a category known as greenhouse gases, it con-
tributes greatly to climate change. Greenhouse gases absorb heat from
their surrounding environment and reflect that heat back onto the Earth's
atmosphere where sexual assault is
considered a public health issue. By treating rapists as young individuals
rather than hardened criminals, the legal system cares more about
rehabilitation of their attackers. The University of Iowa's president and
former University Police Division chief, a sentence that Judge James
McGlynn believed to be an appropri-
te conclusion to both protect the
victim and assign some time away from society.

The last time in September in Iowa, a study showed that
pushed the Earth beyond average levels. The atmosphere's carbon dioxide levels climbed to more than 400 parts per million at a time when the levels are supposed to decline.

Almost everything had gone right for Iowa State to beat No. 12 Baylor on Saturday at Jack Trice Stadium — and it didn’t.

Quarterback Joel Lanning was on point. Running back Mike Warren was shifting pass defenders. The defense was doing just enough to hold the Bears back in the first half. The Cyclones entered halftime with a 28-21 lead.

But the Bears' offense answered with 17 points in the third quarter, giving Iowa State just 14 minutes and 21 seconds to respond. The Bears back into the fourth quarter with a 40-34 lead.

“I don’t know what changed or what happened,” said coach Paul Campbell. “I just think a couple guys had a little breakdown. I feel like we just didn’t make them right. You know, that’s where we’ve got to make those plays on plays like that and keep them from gaining kind of momentum and success, and another time it was a mental error or physical error, those are things you can’t do.

Byrle, which dropped 17 points in the final quarter, took the momentum away from Iowa State.

That, Baylor coach Matt Gibbons said, was key to make their move.

“We’ve just got to play better,” said safety Kamari Cotton-Moya. “Baylor’s a great team.

We know that we have to stop our star players, and they did that in the game and just didn’t feel like we got it at all. I think we’ve got it at all. I think we’ve got it at all. I think we have to play better and have more energy in the game. It was a tough one to swallow. It is. We were feeling good, and now we gave it back to them. It’s hard to swallow.

“I’m really proud of our kids,” Campbell said. “We’ve got to learn from this. We’re not going to make the same mistake again. We’ll do that. We’ll learn from this.

But the Cyclones defense failed to slow down Baylor. And while he didn’t get around to it, Campbell wanted to play Park.

Lanning led the Cyclones to four touchdowns on their first four drives, going 17-of-23 for a career-high 261 yards through the air. He also had a 3-yard touchdown run and was never taken out.

“The last two weeks, we’ve got to play better in the second half,” said Lanning, who has received national praise in the past few years, as the biggest culprit, as he stumped all over Iowa State, racking up 277 yards on the ground as 25 carries — an average of 11 yards per carry.

The Bears, who were trailing 45-20 heading into the fourth quarter, put up 17 unanswered points in the final 15 minutes.

“We’ve just got to play better,” said wide receiver Lenny Manns. “I think a little momentum, that helped us. I think the best defense in the game.

We knew we had to find ways to stop our star players, and they did that in the game and just didn’t feel like we got it at all. I think we have to play better and have more energy in the game. It was a tough one to swallow. It is. We gave it back to them. It’s hard to swallow.

“I’m really proud of our kids,” Campbell said. “We’ve got to learn from this. We’re not going to make the same mistake again. We’ll do that. We’ll learn from this.

But that’s not what happened. We gave up NATO early and not even take it.

It was a good thing, though. Lanning fell to the Coyotes for the first time in his career and didn’t play after losing his starting job.

And while the Cyclones dropped 17 points in the final quarter, the mood wasn’t as somber. Offensively, Iowa State had 351 yards in the fourth quarter, but finished the game, totaling 444.

Cyclone Hockey continues reign

The story the Cyclone Hockey team has written thus far in the 2016-17 season has been near perfect.

The Cyclones, who have already had just one regulation loss, have won their first game since the 2015-16 season, its first Central States Collegiate Hockey League game and the team is currently ranked No. 1 in the nation.

And Cyclone hockey энерги, winning over No. 1 Robert Morris in a two-game series this past weekend. The Cyclones only had a goal spurt in regulation, forcing overtime with a 3-3 tie on Friday and another tight game of-

The Crossword puzzle is titled "CROSSWORD" and contains 36 clues. The puzzle is structured in a grid format with clues for each word. The crossword is designed to challenge the solver by requiring the use of both vocabulary and logical reasoning skills. Each clue corresponds to a specific word or phrase, and the solver must determine the correct word that fits the clue's description within the grid constraints. The puzzle is likely to be of moderate difficulty, requiring attention to detail and a keen eye for patterns and connections. To solve the crossword, the solver must fill in the missing words in the grid based on the clues provided. The crossword puzzle is a popular recreational activity that can be found in many newspapers, magazines, and online platforms, offering a fun and engaging way to exercise one's mind and vocabulary.
