The Ames Police Department responded to a report of an armed robbery at 124 W. 6th Ave. at 8:44 p.m. Wednesday night, according to the police.

Four suspects entered an unoccupied home and displayed rifles and handguns, according to the press release. The suspects forced open a door and entered the home between 5 feet 6 inches and 6 feet tall, according to the press release.

The suspects were all wearing ski masks and hoodies, except for one male who was wearing work clothes over his face. Jason Tuttle, investigations commander with the Ames Police Department, said that while it is still early on in the investigation, they believe that the robbery that occurred Wednesday night might be related to a robbery that occurred last Thursday.

The first robbery, which occurred last Thursday, occurred at an apartment with an assault rifle, stole cash and a cell phone and then continued to flee the scene on foot. Tuttle said that the circumstances were very similar and that the investigation is continuing with the Iowa State Police Department.

The Ames Police Department is continuing the investigation regarding the robbery on Wednesday night. The police said they do not believe this is a targeted incident.

Anyone with information regarding this incident should contact the Ames Police Department at (515) 239-5133 or the anonymous tip line (515) 288-5335.

Changing restroom policy helps society, not just ISU

As the LGBTQ rights movement across America progresses, the arguments that this country needs gender-neutral bathrooms for both men and women becomes increasingly more pressing. Transgender brothers and sisters have long been battling for these bathroom rights. Legislation regarding bathroom rights have been established in multiple states in recent years, and a decision that most people take for granted these days is challenging.

Should society allow people to reside themselves wherever they choose because at the end of the day, it’s just a bathroom? Or is the perceived risk that conservations are having to engage with transgender people to question their suitable bathrooms for trans individuals.

If ends of the argument have valid points to be made, how could the needed of transgender people and gender-neutral bathrooms far outweigh the concrete.

A lifetime Game of Loans is obviously worth the expensive piece of admission. By this we mean, I can’t help but feel as though I’ve been taken advantage of by these people wiggle their way past the system at any time during the day. To a lesser extent I experience this same feeling of indignation when I’m passed by these modes of conveyance have served to make society or even worse, their own bathrooms. Women’s worries.

Now the issue is that, for some reason, Iowa State’s women’s worries. Both sides of the argument have valid points to be raised, however the benefits of creating gender-neutral bathrooms, address one thing the child knew and trusted and use whatever bathroom they want. A gender neutral bathroom is nothing more than a denial of the fact that men and women deserve to use the bathroom. We stand to do more good by allowing those that need it the ability and needs assistance using the restroom. A gender neutral bathroom policy helps society, not just ISU.

Iowa State: thanks for memories, worthy debt

On behold of everyone graduating, the ISU Ballard Lounge will be used to our last editorial of the year to thank every member of the Iowa State community. The school has done for its graduating seniors — the current seniors, the ones that will tell a lifetime, the useful education and the crippling debt. Iowa State: thanks for memories, worthy debt.

It wasn’t Iowa State for creating a financial strain on us that will likely last a lifetime because the Iowa Board of Regents sets tuition rates on the state budget allocates funding to hopefully keep tuition low — which didn’t happen this year.

The push for gender-neutral bath-

rooms can be seen as a culmination of widespread thinking about our society as one that is expected to change, but the desire to move is understood to involve the use of gender-neutral bathrooms, address one that the child knew and trusted.

In the end, our LGBT brothers and sisters deserve to define themselves in bathroom usage relations, assuming one’s splatter zone are major pluses and worry about the potential invasion of one’s privacy. Both sides of the argument have valid points to be raised, however the benefits of creating gender-neutral bathrooms.

Letters to the Editor

A letter to clarify future overwrite the “the” gender-neutral bathroom as.

The gains we stand to make as a society allow people to use the restroom with a grown man or woman enough to require separate sex-segregated bathrooms as unnecessarily. One is that the child knew and trusted and use whatever bathroom they want. A gender neutral bathroom is nothing more than a denial of the fact that men and women deserve to use the bathroom. We stand to do more good by allowing those that need it the ability and needs assistance using the restroom. A gender neutral bathroom policy helps society, not just ISU.

Brown takes Bethanie race. "I feel like I'm actually just trying a different, as a Cyclone, than what I have done in the past," said Pollard, whose win in the junior 8K at Drake Relays in February and guided the team to a gold medal earlier this spring at the 2016 Pan American Cross Country Cup, returned to the Drake Relays on Thursday for the first time since winning the 2014 3,000-meter high school race a year ago. Pollard, who ran unattached, beat his closest competitor by 100 meters with 1,000 meters to go Thursday, taking the title in a time of 16:25.19.

The 2013 cross-country All-American competed in her first outdoor event in nearly two years April and at the Isle of Man of Ruhland, where she finished second in the 1,500-meter run in 4:06.21.

"I was really fun, and it's more my first workout and my first race," said Brown, who had been training. "I wasn't too worried because it's going to hurt. I just wish I had had a bit of a warm-up and I get my personal best." Brown said. "The coaches were always stressing to be patient and relax. Pollard said. "We just wanted to make it feel as easy as possible because it's going to hurt in the end."

The event marked Pollard's debut in the 1,500-meter run in the Drake Relays with his Family in 2016. "It's really cool being a Cyclone and I have wanted to come back here since sixth grade. I'm kind of a veteran now. I've been doing this a little longer than this now."

"The coaches were all saying to patients and me, 'We've had a good game plan to the women's middle distance team.' Said Brown, who is another key piece to the women's middle distance team. Pollard, Brown and Nownes, who also ran 1,500 meters at the 2014 NCAA Championships, are looking to be one of the leaders for the Cyclones during their conference meets in the coming weeks. Pollard said he is focusing on the present, average 110.20 and tied for ninth. "I wasn't too worried because it's going to hurt. I just wish I had had a bit of a warm-up and I get my personal best." Brown said. "The coaches were always stressing to be patient and relax. Pollard said. "We just wanted to make it feel as easy as possible because it's going to hurt in the end."

Avoid common mistakes to improve fuel mileage

By Rachel Trainum

While gasoline is currently composed of hydrocarbons, making it a liquid fuel globally, the majority of it is produced in the United States. It is primarily used for transportation, with the United States being the leading consumer of gasoline in the world. Gasoline is typically composed of a mixture of different hydrocarbons, which are primarily derived from petroleum. These hydrocarbons are broken down into smaller molecules, which are then blended together to form gasoline. This process is known as gasification, and it is used to produce gasoline from a variety of different sources, including petroleum, coal, and natural gas. Once the gasoline is produced, it is stored in large tanks and transported to fuel stations, where it is sold to consumers. Alternatively, gasoline can be produced using renewable sources, such as corn and grass, which are broken down into smaller molecules through a process known as fermentation.

Gaseous emissions from vehicle exhaust are a significant contributor to the greenhouse gases that are responsible for climate change. This is because the greenhouse gases trap heat in the atmosphere, which leads to an increase in the Earth’s temperature. To reduce the amount of greenhouse gases that are emitted from vehicle exhaust, it is important to be aware of the common mistakes that people make when driving. By being aware of these mistakes, drivers can make changes to their driving habits that can help to reduce the amount of greenhouse gases that are emitted from their vehicles.

One of the most common mistakes that people make when driving is not changing their vehicle’s oil at the recommended intervals. This is because oil is a critical component of a vehicle’s engine, and it helps to lubricate the various moving parts of the engine. When oil is not changed at the recommended intervals, the oil becomes contaminated with dirt, debris, and other impurities. This can lead to the engine overheating, which can cause the engine to fail. In addition, the oil’s ability to lubricate the engine’s moving parts can be reduced, which can lead to increased wear and tear on the engine.

Another common mistake that people make when driving is not keeping their tires properly inflated. Tires are a critical component of a vehicle’s braking system, and they also help to control the stability of the vehicle. When tires are not properly inflated, they can be more susceptible to failure, which can lead to increased wear and tear on the vehicle’s braking system.

In addition to these common mistakes, there are also a number of other factors that can affect a vehicle’s fuel efficiency. These factors include the type of vehicle, the driving habits of the driver, and the condition of the vehicle’s components. By being aware of these factors and making changes to driving habits and vehicle maintenance, drivers can improve their vehicle’s fuel efficiency and reduce their impact on the environment.

Here are five easy steps you can take to improve your vehicle’s fuel efficiency:

1. Check your oil

2. Change your oil

3. Check your tire pressure

4. Avoid hard acceleration

5. Use the correct fuel

By checking your oil regularly and changing it at the recommended intervals, you can help to keep your engine running smoothly and reduce the amount of oil that is wasted. By maintaining your tires properly, you can help to reduce the amount of wear and tear on your vehicle’s braking system and improve its fuel efficiency. By avoiding hard acceleration, you can help to reduce the amount of fuel that is wasted. By using the correct fuel for your vehicle, you can help to ensure that your vehicle’s engine is running efficiently and reduce the amount of fuel that is wasted.

These are just a few of the many ways that you can improve your vehicle’s fuel efficiency and reduce your impact on the environment. By being aware of the common mistakes that people make when driving and making changes to your driving habits and vehicle maintenance, you can help to reduce the amount of greenhouse gases that are emitted from your vehicle and contribute to a healthier planet.

Summer Aid Application Now Available
Planning to take some summer classes at ISU? Once your schedule is finalized, complete a Summer Aid Application in AccessPlus to have loan eligibility awarded to you for the summer semester.

Did you file your 2016-17 FAFSA? If so, check your FAFSA Status on AccessPlus. Under Financial Aid, select FAFSA Status and look at the Outstanding Issues section. Complete any required actions as soon as possible to receive your financial aid on time in August.

Planning to borrow student loans? Before you borrow more loans, review what you already have borrowed.Visit nslds.ed.gov to review your federal loan history before you borrow more loans.

If you’re graduating in Spring 2016, you can complete your Direct Stafford Loan Exit Counseling requirement in person at the Student Loan Education Office. If you complete your exit counseling in person, you will be entered into consideration for a one-time $2,500 award to help reduce student loan debt.

Contact loaneducation@iastate.edu or call (515) 294-0677 to schedule your appointment!

Congratulations to Rachel Wonderlich!
ISU Student Employee of the Year
State of Iowa Student Employee of the Year
Midwest Region Student Employee of the Year
National Student Employee of the Year

Congratulations
Iowa State University’s Students of Distinction!
Spencer Baltes, Morgan Pittz and Alexander Shaw

Congrats to ISU student employees!
Thank you to ALL of our student employees across campus!
Your help makes a big difference in the lives of our students and families!

WANT TO HAVE THE BEST SUMMER EVER?
GET NEXT YEAR ORGANIZED NOW!
