As for the Neck

By THIRZA HULL

Flaming, flamboyant flairs of color float out upon the spring breezes and conclusively draw our attention to the fact that you are no one this spring unless you are correctly "necked". Unquestionably a becoming neckline has more to do with this season's dress than almost any other single feature. There is a great variety of necklines any one of which is very chic—from such an angle as the "batwing" to one which may be buttoned all the way up the front or worn open to form a V-neckline. The influence of the mannish collar is recognized on tailored suits and topcoats are usually double breasted and are often collared with velvet. The newest neckline for evening is the V-shaped one lower at the back than the front. This then is the range of necklines favored for Spring 1925.

We all want our frocks to have the most becoming neckline of course we were planning on using a dress from last spring's wardrobe. As far as the lines of the dress itself go they invariably follow the straight silhouette of last year. The dress however has, we will say, a bateau neckline cut far out on the shoulder that dubs it at a glance of last year's model. If only the neck was acceptable the dress need only be shortened to be ready for the entire season. Many are the ways and means of making over the neckline though at first glance it may seem an impossible thing to do. A little ingenuity and a vast imagination need be your only tools.

There are three possible ways of re-making the bateau neck. One is by the use of a scarf. It may be fastened across the back and tied in front or fastened all the way around and tied in a loose bow in the most becoming position. It would help fill in a space to tie it on one shoulder and allow the ends to fall down the front and back. It is also possible to build a high neckline from the bateau neck by making it fit snugly up to the pit of the neck. It is then comparatively simple to add a high collar fastening in back and with a tiny visible turnover to make it more becoming and to match the turnover cuffs, likewise small and white. The third way of fixing the bateau neck is to cut it in a V-shape in front, fill up the space over the shoulders and cover the whole with a lapel collar that will successfully conceal all the seams. Any one of these three ways will make a becoming and up-to-date neckline.

A dress can be freshened up by the addition of one of the bright ties that are so popular among the young men. Red ties have seen their better days here at Ames, but there is a large variety of striped and plaided ones to choose from. Why not then to some degree around the neckline of a dress. First we notice the hem line of dress to see if it has the correct flare and then our eyes center on the neckline. Since it is a vital part of the costume we should see that it is both original, and yet in the mode. Costumes are judged on their individuality and we are not far from being individual if the neckline of our dress is different.

New Health Ways Make Happy Days

By FLORENCE E. BUSSE
Professor of Home Economics

"Not going to eat your dessert, Miss Williams?" inquired our hostess. Miss Williams looked longingly at the concoction of whipped cream, sugar, nuts and cake. Surely it was fit food for the gods and must have taken hours to prepare. There was such evident disappointment on her face, "No, it can't be done," sighed Miss Williams with more evident disappointment in her voice, "but I can't go the round of parties and eat all the tempting goodies. I tell you I slimmed a pound last week and I will not go back to my old weight.”

The disappointment of our hostess was too real. "I tell you," she said, "I am getting so I loathe the word calory. I never go to a dinner anymore, I never am invited out to a luncheon, I am never tempted to an afternoon treat of a "double chocolate with nuts" but someone spoils the whole affair with a discussion of calories or reducing. I am sick of the whole business and it bores me to death." Miss Williams sighed again, "But I'll tell you it's just a matter of choice. I know that I'll gain if I eat your goodies and that is my downfall which may be buttoned. I tell you I can't overeat and lose, it is impossible.

The conversation had its effect on the whole table. The thin ones ate jubilantly the other heavier ones ate gingerly and with evident deliberation.

This little episode is just one of many other similar ones which is taking place here, there and everywhere. Thru many agencies interest in what is good for one has been stimulated and has come to be realized and agreed upon in many cases has been supplemented by facts. A knowledge of facts brings with it a conviction, and this conviction may have the force of a stirring ideal.

Advertising usually makes its appeal to what is already in the minds of its readers. We are urged to eat this food because it will give iron for the blood, this food is desirable because it provides the desirable bulk. Another food is commended because the valuable vitamins it originally contained have been retained in the cooking process. This garment manufacturer instead of making his sale on the basis of price uses his prestige as it does previously make his chief claim on the ground of freedom of movement a desirable qualification for the clothes of the health resorts stimulate the need for healthful relaxation. All modern advertising gives the health slant to their products.

One wonders sometimes if the great modern interest in health is not the natural outgrowth of a democracy such as ours. Our democratic civilization could not be content with a philosophy of health like that of the Greeks. "Health for health's sake" meant only the development of the body. It might have had justification in "Health for beauty's sake" but our present civilization asks many questions in challenging terms: "Why should I be interested in health?" "Will it make me more efficient?" "Will it contribute to my happiness?" "Will it make me a more desirable and helpful member of society?" The scientist has proven and is proving that health does make for efficiency. The psychologist has proven that good health is fundamental to happiness. The sociologist has shown us that not only does health make for the individual's best service to society but that in order to be a good member of society it is necessary that one care for one's health. A new idea this: "I must live my best physically as well as mentally and morally if I am to be a desirable member of society." Modern education is recognizing this fact and is setting education in health as one of its aims. The curriculum must give information as it has always done but it must do more than that. It must give vital stirring information that will lead to real ideals of health. America's health program is just beginning. It has yet a long way to go. Ames, Iowa

of style and the only men who knew the secrets of its making died so the exact details of the work that they did are not known today. Some pieces have been made but not many because of their inferior quality.

N. Hudson Moore, one of the best authorities on lustre ware wrote, "Whole tea sets have been made for women with a band of bright blue have been offered me as antiquites, every line and its hard brassy color showing in an unmistakable fashion its recent manufacture. There is a depth of smoothness of glaze and a feel to the old lustre that are not easily mistaken. The lustre ware went out

when the metallic lustre was made in England each manufacturer guarded his method jealously. Lustre ware is composed of about one thousand pieces of all kinds of lustre. 

"When the metallic lustre was made in England each manufacturer guarded his method jealously." Lustre ware went out

NEW HEALTH WAYS

MAKE HAPPY DAYS

(Continued from page 4)

are realizing it. Mothers who care for little children are conscious of it. Education does not have to be gained within school walls. The intelligent mother has the greatest of all parts to play in this new health program because in the early years habits are established and because in the home most of our health program is carried on.

The National Education Association and the American Medical Association appointed a joint committee to study the health problems in education. With careful technical study they have set up the aims of health education. The home, the community as well as the school must meet the challenge if this program is to succeed.

As set down the aims of health education are stated briefly as follows:

1. To instruct children and youth so that they may improve their own health.
2. To establish in them habits and principles of living which will sustain their school lives, and in later years will assure that abundant vigor and vitality which provide the basis for the greatest possible happiness and service in personal, family and community life.
3. To influence parents and other adults, thru the health education program for children to better habits and attitudes, so that the school may become an effective agency, for the promotion of the social aspects of health education in the family and community as well as in the school itself.
4. To improve the individual and community life of the future; to insure a better second generation, and a still better third generation; a healthier and finer national and race.

General Farm Assistant at Mt. Auburn

Leta Sefton ’13, is a general farm assistant at Mt. Auburn, Iowa, a position which she has held ever since she left Iowa State College.

Ruth Ellen Benjamin Howe ’05, has recently been appointed matron of the New York State College for Women as consequence of her residence at Bedford Hills, N. Y. She reports that her work is delightful and that the institution is one with which she is proud to be connected.

Edith Cairns Evers ’07, who lives at 616 Pearl St. Denver, has been visiting at the home of her parents in Ames. Mrs. Evers has been secretary of the Colorado Alumni association.

EVERY DAY ART

(Continued from page 2)

would preferably be centers of interest in their respective homes. Mr. Johonnot’s suggestions as to the use of pottery and pictures is interesting for its workableness as well as its attractiveness. The next step consists of acquiring an array of these articles in different hues, values, shapes and sizes, so that one may change the appearance of the interior from time to time by merely removing one type of picture or bowl by a distinctly different type which is equally as fitting in relation to the surroundings. For the person wishing to express moods or ideas this suggestion is invaluable.

In speaking of pictures for the home Mr. Johonnot made these helpful statements:

"Pictures are not complete in themselves but need the proper surroundings to bring them out."

"A picture should be more than a pleasing effect or a realistic reproduction; it should be a necessary part of the design of the room it is used in.

"A print of a good picture to be better thought of than an original of poorer quality."

"Pictures are often better placed on tables rather than hung on walls."

By placing them so, the pictures are brought into closer relationship with other objects and colors and seem to have a more definite connection with the scheme.

"Flooding the room with tones of one color is bad," says Mr. Johonnot, in speaking of the use of color in the home. He asserts that it is not a safe thing to use only one color in its different gradations any more than to have glaring inconsistencies in different colors.

Commenting upon period rooms, Mr. Johonnot stated that they were out of place. Since rooms should be expressive of how the people of the particular time lived, it is not appropriate for us to have rooms expressing the lives of other times. What we need is an interior which speaks of our own lives and the age in which we live. All of us have some slightly different needs so that our homes will of necessity by unlike in many respects, and in that difference will express the individuality of the planner.

The same principle applies to exteriors as well. Climate and the surrounding landscape are two factors of prime importance in determining the external appearance of the home. Spanish architecture which is used extensively in California is very good there and is even appropriate in this part of the country. The Colonial house is good in the east where homes are crowded closely together and small lawns are used, while the southern Colonial structure is suited to extensive grounds. If surroundings, climate, and other factors do not call for one of the recognized types in its entirety, you may take a type of character and feature and adapt it to your conditions. The English house is one which may be easily adapted to many conditions and has many attractive modifications. The prospective home builder should, however, have a particular site in mind before he begins his search for what is useful and views may be utilized and so that the house may seem to be an integral part of the landscape.
