1st Flow Feed System Failure Analysis

Client: 1st Flow, Lawler, Iowa

Problem Statement

- Current 1st flow models are prone to cracking stripping for unknown reasons
- Customers do not want to buy a product that fails

Objectives

- Determine components affected by failures
- Analyze components determine cause of failures
- Provide recommendation reports based on data collected

Methods

- Failure Mode and Effect Analysis Report (FMEA)
- CAD Simulation
- Physical analysis of system components

Proposed Solutions

- Create a recommendation report base on determined failures

Major Outcomes

- Determine Failures
- Provide Recommendation Report
 - Provide accurate cost analysis for recommendations

Benefit to Client

- Knowledge of failure points
- Access to information to potentially increase product reliability
