Iowa State participates in delegation to India

By Mike Randleman

Iowa State, constantly seeking to increase its worldwide presence, will put this sentiment into practice with a week-long delegation to India.

This delegation, which departed last Friday, “comes from the provost’s office working with the Board of Regents,” Gen. (Ret.) Ernie Moniz is planning to lead a larger delegation to India in September, and Rob Fleckenstein, director of communications for the Office of the Senior Vice President and Provost.

The trip is sponsored by the Alliance for U.S.-India Business, a group that has been “very proactive in its representation and has been instrumental in making this happen,” Schwinden said.

Iowa State is not the only institution that has members traveling to a worldwide location.

“There are representatives from [the University of Iowa, Iowa State University, and the University of Northern Iowa], some other schools, some business leaders, and people with knowledge of higher education in India,” Schwinden said.

In total, according to the Alliance for U.S.-India Business, 52 delegates comprise the delegation.

Representing Iowa State are Provost Jonathan Wickert, Matt Almen, interim Dean of the College of Engineering, and Wendy Wintersteen, dean of the College of Agriculture and Life Sciences.

They’re going to spend the better part of their week meeting with their counterparts in universities, Indian businesses, and the Indian government.

“Through this delegation we will have the opportunity to learn more about the universities in India and their priorities,” Schwinden said.

The exact periphery of the delegation is not finalized, but the delegates will have meetings with several universities, visits to businesses, and a trip to the Taj Mahal.

“I don’t know if you’ve heard of the Taj Mahal, but it’s a big castle,” Schwinden said.

Food will also be on the agenda.

“We’re planning on having 10 dinner meetings in which we’ll sit down and have dinner at a high-quality restaurant,” Schwinden said.

Iowa State, however, is not planning to leave behind its favorite foods.

The Iowa State delegation will carry with them their favorite foods and drinks.

“I’m taking a few boxes of Iowa State-branded coffee, but really just to stick to it,” Schwinden said.

Delegation members are also packing lunch items including cold cuts, cheeses, and cookies.

“We’re definitely going to try to make sure we [take] Iowa State items,” Schwinden said. “We’re not going to go do the opposite and try to do all local food.”

The delegation is scheduled to return on March 2.

Cyclone gymnasts deal with concessions

BY BRIAN BRAGGIN

Iowa State women’s gymnastics team held a media day on Thursday, Feb. 7, and revealed upcoming plans for the season.

The Cyclones began their season with a second-place finish at the Iowa City Invitational and a first-place finish at the WSU Invitational.

“We’re looking forward to going to Tulane this weekend,” head coach Di Landy said.

The Cyclones will also host the Cyclone Invitational on March 1.

On March 22, the Cyclones will journey to Pennsylvania to face the University of Pennsylvania.

The team experienced a tough loss to the University of Iowa on Jan. 12.

“Iowa just dominated us, especially on their bars,” Landy said.

The Cyclones have plans to host staff and alumni in the pre-season meet.

“We’re going to have a little Valentine’s Day celebration for our staff and our alumnae,” Landy said.

The Cyclones will also host the Cyclone Invitational on March 22.

Research

Treat chemical warfare agents with safer, lower-cost technologies

BY JASON MORAN

Iowa State University researchers have developed a safer process for using a treatment to break down toxic nerve agents.

Researchers from Iowa State and the University of Cincinnati developed a process for neutralizing lethal nerve agents.

The process, called chemical oxidation, is a safer way to break down the nerve agents.

Researchers from Iowa State and the University of Cincinnati developed a process for neutralizing lethal nerve agents.

The process, called chemical oxidation, is a safer way to break down the nerve agents.

When a nerve agent like Sarin is released, it can form a vapor that can be inhaled or absorbed through the skin.

In the United States, nerve agent detection and treatment are primarily handled by the Department of Justice and the Department of Defense.

But when the team developed the new process, they realized it could be adapted to make safer, lower-cost technology.

The team’s technology has been patented and licensed to a company in the Netherlands.

They are in the process of negotiating a license with a university in Singapore.

The researchers hope the technology will be licensed to a company in the United States.

An individual reported being (reported at 8:35 a.m.).

Two delivery vans at Lot 61D were involved in a property damage collision at Bissell Road and Parkway (reported at 11:05 a.m.). An individual requested from a driver who was charged with driving while intoxicated at Hayward was suspected of operating while intoxicated at 11:05 a.m. An individual reported a theft of a laptop computer at Food Dock (reported at 11:05 a.m.). An individual was requested to the facility for a number of harassing communications (reported at 11:05 a.m.).

Jan. 29

Employees of the Ames Police Department assisted an individual who had been in the ISU Dining Hall (reported at 7:59 p.m.).

Jan. 31

While the researchers develop strategies to reduce coccidiosis in chickens, the attraction of Indian students, particularly within the graduate student population, would increase the current University enrollment. Schweers said.

A vehicle driven by Jonathan Stearns, 22, 2709 Lincoln Way, Unit 306, was arrested and subsequently released on citation for the unauthorized discharge of a firearm (reported at 8:35 a.m.).

The individual was identified as a visitor who had been in the facility for a number of years of their degree at an elite university in their native country. The student then completed their degree in Iowa State. The couple’s desire for - he said he would increase the current number of students who follow Iowa State and currently hold degrees.

The attraction of Indian students would help increase the current number of students within the graduate college. This is not the only way to prove that he is a unique person that is something that will help to continue his education.

The bacteria has major economic consequences, which are animal health and community health. Such bacteria can cause more damage to chicken for human consumption and better human health.

Hiroto Fujii, ISU research assistant professor in the Department of Veterinary Microbiology and Preventive Medicine, said ISU researchers are trying to identify the management factors on farms and most processing plants to protect poultry from coccidiosis.

“Getting to work in the first step in commercial environments in which crop plants are increasing the chances of chicken carcasses being contaminated with this organism,” said Sahin. “It’s really challenging for chicken farmers to take some simple steps for food safety plants,” Sahin said. “It’s really challenging for chicken farmers to take some simple steps for food safety.

It’s really challenging for chicken farmers to take some simple steps for food safety.

The College of Agriculture and Life Sciences “has for many years, had active collaborations with top agricultural universities and research institutions,” Wintersteen said. Wintersteen believes even larger collaborations can be attained in what is an already beneficial partnership with India. “With this trip, we will be interested in exploring any new opportunities and to discuss together with Indian offcials how education and research are key to addressing major challenges and enhancing economic development.” Wintersteen said.

Dunkin’ Donuts’ owner announces new store will be open at all hours

Dunkin’ Donuts on the corner of Sheldon and Lincoln Way has stated they’ll be open 24/7. The franchise, currently Jeff Kelderman is scheduled to open this summer. The new store will open on Thursday, March 14, and will be located in the middle of the Campustown community. Students are excited that the new store will bring in dozens of jobs to the Campustown community.

"The store doesn’t drink coffee every day, but it drinks at least a couple times a week, but that will definitely be times when I am craving donuts,” said Gina Boffa.

"I love Dunkin’ Donuts, and I’m so happy that they are coming to Campustown by 2016." Sexton stated that they will be training approximately 80 employees and planning on having the store open 24/7. Kelderman has scheduled to open seven new stores after the one in Campustown.

Pushing past the troubles of opening a business, the shop is scheduled to start training for employees on Thursday, March 14. "We’ll be doing the offerings probably in the winter months around Spring Break and do a ribbon cutting. We’ll also be offering lunch to Iowa State employees, so we’re in the middle of trying to figure out the branding of that," Crawford explained.

"We’ll give you the conference room if you want it to be a little more casual, but we will teach you how to operate the machine," Crawford said. The franchise, owned by Jeff Kelderman, is scheduled to open 24/7. "We will definitely be times where I am craving donuts," Boffa said. "But, [it was] not enough that it would bother me." Crawford plans to bring in new customers. The colder months aren’t very good for trying to sell apparel, so the shop has projected that’s right, Dunkin’ Donuts on the corner of Sheldon and Lincoln Way have stated they’ll be open 24/7. FAFSA not an accurate determinant

By Michael Belding

Iowa State Daily

The Congressional deal that averted our financial cliff at the beginning of the year did not, unfortunately, solve the problem of paying for college and making sure everyone gets a fair shake. The deal did not finally help Congress to set a national goal for the poorest students to cover their educational needs. The result is going to do anything to make sure that what we see today is not going to be the same outcome.

The website of President Barack Obama states that his administration has a “new goal for student aid” that would give every American college student the opportunity to go to college and finish at a lower cost. This is not an accurate goal for the U.S., especially in light of the current situation.

The nation’s public and private colleges and universities now offer a plethora of general education courses to their students. This is likely to lead to an increase in the number of students who are eligible for financial aid. However, this does not mean that the FAFSA is an accurate determinant.

Cyclone gymnasts, deal with heal concussions

By Maddy Arnold

isdsports

The ISU gymnastics team has been hurting this season. Those contributing gymnasts have all missed time due to concussion symptoms.

The NFS and college football have recently renewed interest around concussion and their effects. They are now being lim- ited to contact sports.

"I think it has been especially stressful for the women’s basketball team," said ISU head basketball coach Paul Dierckson. 

"We think we are a lot more education now than we were before the law." 

Carlin Bowen, Kristian DeCosta and Rachel Tichelaar have all been suffering from concussion-like symptoms this season, causing each of them to miss sig- nificant action on the floor.

"It is really hard because we don’t have a ton of depth on every event," said freshwater Tichelaar, one of the mainstays. "It is less pressure on every person because there are less of us." 

According to a published report by USA Gymnastics, concussions are a "head injury with a tem- porary disruption of brain function." 

A concussion can cause a person to suffer from direct impact — gymnasts hitting or being hit during a fall. A concussion can also result from indirect impact — a gymnast "shaking hard enough" on her feet resulting in a shaking or movement of her brain inside her skull," according to the report.

The latter of those two ways can make it particularly difficult for an athlete and coaches to detect a concussion. Symptoms and signs are not observable on a screen, according to the American Academy of Neurology and the American Orthopaedic Association.

However, one symptom is particularly concerning for the team — a change of balance, which is an essential part of gymnastics.

"With gymnastics, we work really hard with the balance ac- tivities," said Jessica Drenth, ISU gymnastics assistant athletic trainer. "Theutramereally important, (ISU) athletes strive to accomplish some of the activities they do daily."

Some of the symptoms that coaches and trainers look for in an athlete include: "the athlete not being able to perform normal activities, like doing jumps or floor exercises, or the athlete not being able to avoid further injury or, in some cases, death." 

"One of the big ways we are looking for CONCUSSIONS is by looking at their balance," Drenth said.

**Barrage of 3-pointers leads to Cyclone win**

By Dean Berhow-Goll

isdsports

In a game with two teams in sole possession of third place in the Big 12, Iowa State put up 33 3-pointers to defeat Oklahoma 79-66.

"That’s the way we can win," ISU coach Fred Hoiberg said. "That’s the way we I think we thought it was going to be."

Iowa State now sits fifth in the Big 12. The teams sit behind Kansas and Kansas State and are a half-game in front of Oklahoma State and Texas Tech.

After taking nearly 23 point shots in the game against Baylor the previous week, the 3-point barrage continued against Oklahoma.

It was Georges Niang. Then Wally Rebova. Then Larcin. Then Georges Niang. Then Tyrese Haliburton.

"Our first three, Tyrese didn’t shoot a 3-pointer," said Georges Niang. "I think he got a little loopy inside her skull," according to the coach. "To put your name on that list, it’s a who’s who of quality athletes.

"That’s the way we can win," Niang said. "It’s a special teams to find special people." 

"We’re a team where the numbers say we’re going to the NCAA tournament," Fennelly said. "That’s a who’s who of quality athletes."

Iowa State has not lost a game in three weeks, the longest stretch of season so far. 

"We’re a team that is getting better every week," Fennelly said. "We’re a team that is getting better every week." 

"That’s the way we can win," Niang said. "It’s a special teams to find special people."
