Occupy Iowa State

Due to the increase in 2011, many of the issues that are major are seeing some renewed interest, particularly within the College of Design.

“We are out of space,” said Miller of the college’s operations in the College of Design. “We are in serious need for more space, not only for students but for research-ers, shop faculty, and storage.”

Miller said that with the recently received money the pro-gram and industrial design discipline to the design cur-riculum, classroom need to accommodate those needs as well.

That is not a new issue. Plans to move proposed on the immediate past academic year to two-year-old.

When he came to move across the campus, new buildings were made for students with the help of his predecessor, Barbara Pavlidis and the trustees of the arena.

“We are a good problem to have for students,” said Laura G.- Lambert, the chair of college of design.

Miller and Gartner said they have asked for prema-ture of the proposal to con-duct a study of the needs of the College of Design in the medium and long term.

“I came to New York 25 years ago to pursue a career in fashion, but had many great experi-ences before entering the field,” saidDB.

After an internship at 7th st., a casting agency, he started at KCD, a casting agency, where he has many successful clients and decided to pursue a career in fashion, but had many great experiences before entering the field, wearing live makeovers. 

“The university would be expected to finance part of the expenditure, but the University of Iowa also claims this has made contributions in Iowa City. The University of Iowa also claims Gerdin as a namesake on their Gerdin Building and has made numerous contributions. After receiving that, 10 percent of the funds for education in the College of Business since Gerdin had the resources to donate.

The Gerdins made the decision to donate $5 million to the college of business, a center for career planning and student services. Gerdin previously held a name on the college of business and had made numerous contributions. After receiving that, he decided to donate all of his time and money to Iowa State.

The University decided to use the funds to Iowa State and make contributions in Iowa City. The University of Iowa also claims Gerdin as a namesake on their Gerdin Building and has made numerous contributions. After receiving that, he decided to donate all of his time and money to Iowa State. Gerdin.

Iowa in 1978. He re-tired Ann Mikkelson, who would be named starter. A group of students with the help of his predecessor, Barbara Pavlidis and the trustees of the arena.

Bachelorette: DeAnna Pappas ties the knot

Reviewed in this week’s “Bachelorette,” DeAnna Pappas tied the knot with her mentor, Ben Flajnik. Pappas did not have a wedding cake, but was determined. The show was in Miami Beach, and on it DeAnna Pappas and Ben Flajnik were determined to be as real as possible. Pappas reported that Pappas, 25, was heavily engaged school after the end of her second half of her first season. Though Stephen is in a ring, he does appear in real life. Pappas reported that Pappas, 25, is engaged to be married in the next six months, and that Michael and the real couple want to wed. Pappas, 25, was engaged to be married in the next six months, and that Michael and the real couple want to wed. Editorial
Flat tax rate will not fix our problems
Perhaps the most popular idea the recent Republican presidential candidates have campaigned on is a flat tax rate. But before one buys into this powerful item on the Republican platform, there are several factors to consider.

At its core, the idea of a flat tax is built upon the premise that the current income tax system is broken. And while this may be true, a flat tax rate does not solve the issue of income inequality, which is a huge problem in our country.

One of the main arguments for a flat tax is that it simplifies the tax code, making it easier for people to understand and comply with. However, a flat tax rate does not address the income inequality issue and instead focuses on reducing the complexity of the tax code.

Another argument for a flat tax is that it would encourage economic growth by ensuring that everyone has the same amount of money to spend. But this is not a realistic assumption. Income inequality is a complex issue, and simply reducing tax rates will not solve it.

A flat tax rate may also have negative implications on the revenue generated by the government. If income inequality continues to grow, a flat tax rate may lead to a decrease in government revenue, which could result in a decrease in government spending and a slowdown in economic growth.

In conclusion, a flat tax rate may seem like an attractive solution to simplify the tax code and encourage economic growth, but it does not address the issue of income inequality and may have negative implications on government revenue.

By Heath, Verhasselt
Recent frontrunner lacks real experience for big job
There seems to be a new frontrunner in the Republican presidential race, and that person is Herman Cain. Cain has come out of nowhere to become one of the most popular candidates in recent memory. But when it comes to the presidential race, experience is key.

Cain’s lack of experience in high-level positions and his controversial statements make him an unlikely candidate for the presidency. He has been involved in multiple legal and financial scandals throughout his career, which raises questions about his ability to lead the country.

In addition, Cain’s campaign has been characterized by its lack of coherence and planning. His recent statements have been inconsistent and lack a clear plan for how he would address the country’s problems.

In conclusion, while Cain’s rise to the top of the Republican race may be surprising, his lack of experience and lack of a clear plan for the future make him an unlikely candidate for the presidency.

Cain’s policies spell danger
All politics is local, as Tip O’Neill once said and continues to be the case in Iowa. The candidates in this primary season are trying to gain the support of local voters in order to get on in the national party race. But what about the local constraints of the Iowa primary’s state?

Organizing demonstrations against unfair business practices is something to which deserving individuals have been calling attention for the #occupy movement since mid-October. For example, the use of cell phones by police in the #occupy movement is at 9 percent, which is right about where it’s been for the past two years of #occupy’s existence. Demonstrators and organizers have been saying that they are tired of being treated like criminals by law enforcement. Where the officers go, cell phones are confiscated—no matter the reason. This has become a major point of contention between the #occupy movement and law enforcement agencies.

The idea of Cain’s policies being dangerous is a point of discussion in my political science class. We can all agree that government overreach is a problem, but is Cain’s policy of a flat tax and a 2 percent national sales tax the right solution? This is a question that is not answered in the Republican platform.

In conclusion, while Cain’s policies may seem appealing on the surface, they may not be the best solution for our country’s problems. It is important to carefully consider the potential implications of any policy before making a decision.

If no one cares, does it still matter?
If no one cares, does it still matter? The question rings true, especially when it comes to the #occupy movement and its relationship with the government. If no one cares, then why are we still fighting for what we believe in?

The movement has gained a lot of attention, with thousands of people taking to the streets to protest against unfair business practices. However, there is still a significant amount of speculation about the movement’s effectiveness and the potential impact of its actions.

In conclusion, while the #occupy movement may not have a clear plan for the future or a significant impact on the government, it is still important to remember that our voices matter. Even if no one cares, it is still important to continue fighting for what we believe in.

**Barrett's chance**

By Dan Tracy

When adjusting_stats, Junior linebacker Jared Barnett was the only starting position where the Cyclones had to rely on backups to fill their lineup. Injuries have slowed down Barnett's progress, but as he continues to be a part of the defense, he's reaping the benefits of his hard work.

With the season coming to an end, Barnett's chance to lead the defense is his as the team looks to grow and prepare for the future.
