This Book is brought to you for free and open access by the Iowa State Daily, 2013 at Iowa State University Digital Repository. It has been accepted for inclusion in Iowa State Daily, September 2013 by an authorized administrator of Iowa State University Digital Repository. For more information, please contact digirep@iastate.edu.
During the past five to six years, costs and values of land and commodities have been rising. Commodity and land values are expected to continue high through to very low patterns in the last 100 years. There have been three strong indications of this pattern.

The first indication began in the late 1960s, leading to the Great Depression. The second was in the 1970s, better known as the farm crisis. The third indication is now, beginning in 2011. Historically, agriculture has been a cyclical industry, said John Lawrence, associate dean for the College of Agriculture and Life Sciences. “The idea of what goes up also goes down. We’re just encouraging farmers to be wise with their spending and borrow only because their down payments bought them land or they’re just accustomed to those sorts of things.”

Lawrence said the more powerful financial blow could occur in two to four years. Iowa weather conditions are partly to blame for lower crop yields and, therefore, less farm income. “Yields were solid at this year’s low water, price, which cuts into income.” Lawrence said. “This year, because of a record wet spring and dry conditions, it’s looking to be another short crop year. In some areas of the state, farmers (were) solid planted, so they’re falling back on crop insurance.”

This will be the fourth year in a row of corn and soybean harvests being below the expected yields.

Wallace states, “If the weather effect is to blame, then the effect offset during a high-income time for farmers, where they’ll think they were getting a raise all along, when really, it was just a bonus that wasn’t going to last forever.” said Michael Duffy, professor of economics and agriculture.

The effect is a phenomenon through which farmers’ livelihoods could be drastically impacted.

Lawrence said that, in other words, their income declines, their spending does not, either because their down payments bought them land or they just accustomed to those sorts of things.

Lawrence is also encouraging farmers to be wise with their spending and borrowing from banks.

Farmers should assume machinery purchases, plan ahead and get a good sense of where we’re going.”

They should also be wary of taking on too much debt.

Interest rates are currently on the rise. Low rates, was about 1.4 percentage points. They have more than doubled in the last six months.

“The Federal Reserve has maintained historically low interest rates in order to stimulate the economy. However, today, businesses, professors of economics and agriculture, “We are investing and consuming, will invest and spend more when interest rates are lower. The Federal Reserve has done this on purpose—so they do it by lowering the debt instrument and maintaining and spreading its own income. The Federal Reserve has announced it’s going to slow down that activity, which means the interest rates on government debt will go up. In turn, that means the interest rates on most of the instruments in the U.S. economy will go up too.”

However, there is still a boom in agriculture, a possible downturn could have real effects at Iowa State.

Harvey said Iowa’s farm income will be lower than expected, affecting students’ ability to afford the costs associated with attending Iowa State University.

worked recently to convert parking lot is being built under water. However, with a new storm water management system, this does not reoccur flooding to be a problem.

That’s why we’re encircling the dirt for storm water runoff,” said Mark Huss, manager of Storm Water Planning and Management. “We’re using a potential downturn in land and commodity values could have a significant impact on the College of Agriculture and Life Sciences. This downturn could affect enrollment and post-grad job placement as well as Iowa State University’s financial situation.

A capital increase for tuition freeze for in-state undergraduates is among the highlighted topics for the Senate Finance Board of Regents meeting in Colfax Tuesday.

As part of the operating appropriations for the fiscal year 2015, the Senate Finance Board of Regents is going to make the case to the Legislature and support less students... what appears to be a small step is really a positive step to put Iowa State on the right educational path.

The general fund increase was developed by the board’s office of legislative relations, according to university communications director, Tim Bruns. “It is a helpful planning instrument to help the universities to adjust to the future.”

Inflation has an index designed to track the inflation of college expenses. Each year, the index is set to help planning institutions adjust to changes in the future.

The aggregate proportion of expected tuition of 5.3% for fiscal year 2013 to fiscal year 2014 for the amount of $652.7 million is desired by the board. The amount, approximately $75 million more, is allocated to help change environment, financial aid and salary differences.

Iowa State has a report to the Senate Finance Committee, is included in the six-year capital plan (fiscal year 2013 to fiscal year 2019) for the amount of $816 million from state funding and an additional $322 million from other funds.

The inclusion of the overall capital request of $1.3 billion for fiscal year 2013. From this amount, approximately $75 million more, is allocated to help change environment, financial aid and salary differences.

Iowa State has a request of $170 million for the Bioscience building as part of the fiscal year 2013 capital proposal. The Bioscience building is expected to make the case to the Legislature and support less students... what appears to be a small step is really a positive step to put Iowa State on the right educational path.

The Education and Student Affairs Committee’s agenda contains the biennial faculty activities report, which provides an overview as to the responsibilities and expectations of the professors of the three universities.

Wednesday morning, the board is set to assemble in open session to hear a report on the 2013-14 fiscal results, as well as a report on the work of the three universities.

**College of Agriculture fall convocation kicks off in new Harl Commons**

Lindsey Keores / Iowa State Daily

Carrie Hall’s newest gathering space will play host to the College of Agriculture and Life Sciences fall convocation.

The event will be on Sept. 10, in the Harl Commons in the basement at Carrie Hall at 11:30 a.m.

The College of Agriculture will provide students a glimpse into the life of the Harl Commons in the basement at Carrie Hall at 11:30 a.m.

The decision was made to move the convocation to the Harl Commons as a convenient way to understand the new space in the public area.

This year, because we just opened the Harl Commons and have gone through a lot of new experiences, it would be the perfect place to hold our convocation," said Brian Meyer, program director of agriculture convocation events.

The event will be a kickoff for the fall semester.

Wendy Stintzner, dean of the College of Agriculture, will welcome the college’s faculty and staff back to campus, as well as parents and students who have never seen the campus before. She will also have an open door that welcomes students to attend. The newly initiated event will be officially recognized as a grand tour.

"We’re here to get the grove again with the students, it’s a way to get people together and meet the new faces in the faculty and staff in a fun and informal way," Meyer said.

At least 300 awards will be given out at the convocation.

The College of Agriculture Development Award will be presented to a student who has been in a domestic violence situation and has earned a degree. The award will be presented to a student who has been in a domestic violence situation and has earned a degree.

"Awards are for anyone who has been in a domestic violence situation and has earned a degree," Meyer said.

"We’re here to help people that have been in these situations and try to help them cope with the trauma," Cassabon said.

The volunteer fair has an agency or organization for all majors and interests.

"I was thinking about walking around the event and checking it out and talking to people, because I know it’s an internship," Cassabon said.

Volunteerism is a good resume builder because it shows that a student is active in their community.

"I think it is good to help out your community and help out the people around you as well," Cassabon said.

**Volunteer work, internships available for all majors and interests at fall fair**

Jordan Richgels / Iowa State Daily

Guest Hall was filled but the student coordinators thought it was a big success.

The co-chairwomen distributed ads around campus, building on campus to make sure the event was well attended.

"It’s a good way for people to get involved in helping the community with social work and things like that," said Karen Ott, director of the Servant Leader Center.

"Now that we’re in the groove again with the students, it’s a way to get people together and meet the new faces in the faculty and staff in a fun and informal way," Meyer said. At least 300 awards will be given out at the convocation.

Lecture: New planet systems rich with elements

Alumnus describes Kepler discoveries

Kepler discoveries

Delaney Warkendt

Science News

Scientists study other planetary systems to learn more about our own. To gain students a better understanding of what this means, Biologist Fortney, ESE alumni and professor at the University of California, Santa Cruz, gave a lecture addressing the composition and atmospheric physics of planets outside our solar system. NASA launched a space telescope called Kepler. Fortney said, "What Kepler is doing is that it's showing us is that our solar system is not unique to the sun. There are many, around thousands of stars. So what it's doing is that our solar system is not a good representation of the diversity of planetary systems found around other stars."

Alumnus is the planet closest to the sun, which makes our planetary system unusual to others because the space in between the two usually contains other planets that could be bigger than Earth. In other planetary systems, there are two or more planets two to three times the Earth radius in the habitable zone. Fortney said, "This means we may have a very different kind of models of the atmosphere and the interior of planets, which we then can compare directly to the observations of those kinds of planets."

Fortney said, "We're trying to figure out what these intermediate size planets are made of, and then figure out how they form, then maybe figure out why our planetary system doesn't have any, and even though we have some, how do we fit it into a very common kind of planets?"

Fortney and his team take snapshots of the atmosphere of Jupiter, which allows them to examine molecules in Jupiter's atmosphere. "We actually know that Jupiter is more enriched in the heavier elements than the sun is," Fortney said. "So, a heavy mass planet, is a truly unique mass that we can't even reach in the Earth. In Chiron and Neptune, which are lower mass planets, we're seeing that it's even more enriched in these heavier elements."

"And, so these other planetary systems, we can actually see the planets, but we can't take spectra of the planet's atmosphere," Fortney said. "We're looking for signatures of the planets by looking for what they absorb light in the planet's atmosphere."

"By looking at the absorption features, Fortney and his team can try to figure out how much of a certain gas there is in planet's atmosphere within a system."

"And so, these other planetary systems, we can't actually see the planets, but we can still take spectra of the planet's atmosphere," Fortney said. "We're looking for signatures of the planets by looking for the planet's atmosphere."

Fortney said, "We're trying to figure out how much of a certain gas there is in the planet's atmosphere within a system."
Editorial

What's really happening in Egypt? How is migration affecting our planet? Are there real ways in which students can help combat climate change? And what is the impact of separation between Church and state?

These are the kinds of things that students may begin to address by listening to authors, policymakers, performers, and professors at Iowa State University as part of the University's Lectures Series, a program co-driven by the College of Liberal Arts and Sciences and the Office of Student Life.

With the quantity of homework students have every day, it can be easy to forget that there are other activities that they are involved in, or it's easy to lose sight of the bigger picture. When we're dreaming of our next frisbee tournament and getting lost in the moment, we forget that it doesn't have to stay on the happenings of the moment.

So, what can students do? They can take every opportunity that arises to network with scholars, authors, and big names in the field, to show them what they have and the number of extracurricular activities they are involved in.

But students should take every opportunity that arises to network with scholars, authors, and big names in the field, to show them what they have and the number of extracurricular activities they are involved in, or to talk to them about what they're doing something they love, or learning about something, and there's always the chance to ask questions and create a passionate dialogue between the audience and the speaker.

Though there are online classes at Iowa State (251 and 252), on average, when the program begins, there are only a few students in the Science Gym and “Mythman” Giant screen.

On Sept. 12, there will be a panel of professors at Iowa State University, and a book lecture by a scholar at the University of Iowa. And Becker City Council's engineer Travis Stephens will make a visit on Sept. 20, to show some of the things he does.

Stephanie Scherer’s lecture on the separation of church and state in Monday’s 10 a.m. class is another example of calling Tom the Professor on the triple-bottom-line thinking. The Supreme Court declared Biblical prayer and student-led Bible readings illegal in 1962, but on April 21, Stephanie went on to celebrate our nation as a pluralistic society supporting religious freedom and public discourse.

But be prepared: If a government agency or a school district (such as the one here in the Scenic U.) rules that students cannot pray privately on campus, the matter would be engaged in an illegal action.

In some instances, there is no constitutionally opposed to the molding of church and state, would be.

The Supreme Court, your religious leader, or in the Constitution, Case closed.

Despite this gloomy argument about separation of church and state, there is nothing better place than Iowa State University, where you can participate in one of the many cultural clubs. You want to engage in a sport, join Fencing Club. You want to experience the outdoors? Join the Mountaineering and Recreation Services. myriad cultural clubs. You want to be human, all in one place.

Let's not forget what a unique opportunity it is to study at a university that offers such religious persecution.

There is literally no better place in the world to get involved in all kinds of things, and you will not regret it. And if you do not like what you are doing, just don't do it. It is also unlikely you will be wrong if you change your major.

So, the opportunities that arise to network with scholars, authors, and big names in the field, are real ways in which students can help combat climate change, and what is the impact of separation between Church and state.

Many will claim we are in a fact a Christian nation, therefore we can't allow University or college students to join the Bible and lead Christian prayers in schools. But, Carrier Colburn argues this is not the case.
Finding a way to Ames

By Ryan Young

Erin Hooker and Bethanie Brown might have come from Ames to play volleyball, but for the most part, the roommates are very content with their choice of school.

The Cyclones, who now call Ames home, were all there getting each other ready to compete. “We’re all there thinking, ‘Yeah, we want to do great things, and we’re ready to be great,’” Hooker said. “I think we’ve had some long, stressful nights, but at this point, they are worth it.”

Despite their senior season of high school, Hooker was named first-team all-conference and was the first high school volleyball player from her state to earn the honor. “I think we’ve had some long, stressful nights, but at this point, they are worth it.”

The Cyclones had six aces on both sides of the net during the weekend. Determining what to change and the very few chances they have left will be the main focus will be getting settled in and regaining the spark that was somewhat of a rude awakening for some.”

“This two have been awesome to work with,” said ISU sophomore Erin Hooker. “One or two points, maybe we were all there getting each other ready to compete.”

Theresa Brown said. “I really want to be able to balance my running and athletics, and a lot of poise. It doesn’t really seem like they’re freshmen.”

They were the primary technical flaw of it.”

The two mistakes on his front-nine led to two of the holes, said Voke, who entered the tournament with a one-under par for the first three rounds. “I think we’ve had some long, stressful nights, but at this point, they are worth it.”

Daley and freshman Nick Voke paced the ISU men’s golf team to a 25th place finish after competing in the Big Ten Golf Championships at The Ohio State Golf Club in Columbus, Ohio. 

Rhoads: Team must focus on practice before weekend Cy-Hawk rivalry game

By Dean Berhow-Goll

For the first time under Rhoads, the team heads into the Cy-Hawk game with a losing record after the 22-20 loss against Northern Iowa on Aug. 31.

The team also finished off with a 3-10 record against the Cyclones.

One of my main goals is just to learn how to manage everything. Brown said. “I really want to be able to balance my running and athletics, and a lot of poise. It doesn’t really seem like they’re freshmen.”

The senior standout has been attributed to the team’s success. “I just think we didn’t really have the passion that I feel we needed to have as a team.”

The team also finished off with a 3-10 record against the Cyclones.

One of my main goals is just to learn how to manage everything. Brown said. “I really want to be able to balance my running and athletics, and a lot of poise. It doesn’t really seem like they’re freshmen.”

The senior standout has been attributed to the team’s success. “I just think we didn’t really have the passion that I feel we needed to have as a team.”

The team also finished off with a 3-10 record against the Cyclones.

now have bow-ties for men that are made of 100-percent cotton, offering ready-to-wear clothing and pieces, as well of look,” Thomas said. “It’s a boutique for statement fashion.”

Thomas said Portobello Road is not only a place to shop, actually, “I came in to Portobello Road to shop, actually,” Kassaundra Kennerly, of Khaotic Radio Station, said. An open model casting call hosted at Portobello Road by Nekia Thomas, of Nekia Marie Online Boutique, was model casting for upcoming events.

When planning out the event, the women decided to scout models for upcoming events and potential models while Thomas would ask the potential models questions, complete the measurements and judge their walk, and Kennerly would take the head shots and assist Thomas with other tasks.

The casting process went quickly and the women tried to make sure the potential models were relaxed and comfortable, in order to get the best results out of their modeling.

“When the girls came in we took a couple of head shots, and we also asked the girls who saw the flyer to submit an online form that included some basic information,” Kennerly said. “Iber taking the headshots, we tried to make sure the potential models were relaxed and comfortable, in order to get the best results out of their modeling.”

When the event was really a success,” Thomas said. “I would do it again because the event was more of what we had wanted, and I met so many great people. I would do it again because the turnout proved to be more than we all thought, and I met so many great people.”

Fall trend guide: Leather

By Mary Kate Knabel

Leather is one of the most significant trends for this season, often associated with motorcycles and 1980s fashion. Currently, skirts, tops, accessories and dresses are among the garments that have been furnished in leather fabric.

“Leather is classic,” said Mai Ávila, of apparel, merchandising and design, who describes herself as leather-obsessed. “It can be recycled through the seasons.”

Leather-tipped pieces are easy additions to a college wardrobe, but Ávila says she is tired of seeing the same leather styles in daily wardrobes. As a facilitator herself, she encourages shoppers to experiment with different types of leather, such as biker, in different shades and colors, as well as with accessories to transform the leather look. “Leather is the go-to choice in my closet,” Ávila said. “Whether it be a belt or jacket — leather always adds some edge to my style.”

Tips for rocking the leather trend

1. Only wear one shade of leather at a time. Mixing shades of leather can sometimes appear overwhelmin.

2. Try wearing shades of leather other than black, for a lighter look.

3. Leather pants are easy enough. There is no need for a belt, just pants and belt.

4. Don’t buy heavy leather pants that are too tight. They will look unattractive.

5. Leather pants are okay to wear — don’t be a nerd.

Winter can be a gloomy time for many, but there are ways to brighten up your wardrobe and your spirit. One way to do this is by incorporating leather into your outfit.

Leather is a versatile fabric that can be worn in many different styles, from casual to formal. It is also very durable and can last for years with proper care.

When wearing leather, it is important to consider the fit and comfort of the garment. Leather can be uncomfortable if it is too tight or too loose. It is also important to choose a style that works well with your body type.

Leather can be worn in many different ways, such as a leather jacket, skirt, or pants. It can be paired with other fabrics like denim or cotton, or worn alone. It can also be worn in different colors, such as black, brown, or even bright colors.

If you are new to wearing leather, it is important to experiment with different styles and fits to find what works best for you. It is also important to invest in quality leather garments that will last.

By Miranda Cantrell

One of the most exciting trends for the fall season is the leather trend. Leather has been a staple in fashion for many years and continues to be a popular choice for modern clothing.

Leather is a versatile fabric that can be used in a variety of ways. It can be used for clothing such as jackets, skirts, or pants, or for accessories such as handbags, shoes, or belts.

There are many different types of leather, each with its own unique characteristics. Leather can be made from different types of animals, including cow, sheep, or goat. Each type of leather has its own unique look and feel.

When choosing a leather garment or accessory, it is important to consider the quality. Lower-quality leather can be uncomfortable and may not last as long as higher-quality leather. It is also important to consider the fit and comfort of the garment.

Leather can be worn in many different ways, such as a leather jacket, skirt, or pants. It can be paired with other fabrics like denim or cotton, or worn alone. It can also be worn in different colors, such as black, brown, or even bright colors.

If you are new to wearing leather, it is important to experiment with different styles and fits to find what works best for you. It is also important to invest in quality leather garments that will last.

that dirt to build up the pad for the parking lot and build the elevation up high enough so it won’t get flooded.

The new storm water management system aims to remove all of the storm water drainage into underground basins. These basins provide containment, filtration and opportunities for infiltration into the underground aquifers.

After sitting in on the students’ final presentations of the storm water management project, Cathy Brown, campus landscape architect for Facilities Planning and Management, became very intrigued by the project. The project, however, could not be finished until there was appropriate funding.

Brown asked Wagner to present the project idea to the ISU President’s Council. The President’s Council immediately became interested in the project as well. After a few years, the funding for the project was raised, and the students were able to team up with consultants to determine the feasibility of the project and the projected design.

“An amazing example and a very powerful example for students to see that their predecessors had these ideas that were very well done...funded to be developed into real plans, and then literally being constructed,” Wagner said. “And that doesn’t happen in our world very often.”

The anticipated completion date for the $1.25 million parking lot project is Nov. 1.

Another vigil organizers, Linda White, sees the vigil as a way to bring awareness to the conflict in Syria.

“They want to come together and...” Huss said of the project. “Let’s control it, slow it down and in...”

“It’s the whole idea with storm water contamination of the storm water management project,” Huss said. “Let’s control it, slow it down and...”

“Let’s control it, slow it down and...”

Brookside Park and Squaw Creek.

The new storm water management system aims to control all of the storm water drainage and prevent the erosion of the drainage problem and decided to write a report to provide possible solutions to the problem.

In 2005 began to take interest in the drainage problem and decided to write a report to provide possible solutions to the problem.

Brown, campus landscape architect for Facilities Planning and Management, became very intrigued by the project. The project, however, could not be finished until there was appropriate funding.

Brown asked Wagner to present the project idea to the ISU President’s Council. The President’s Council immediately became interested in the project as well.
