The LGBT Faculty and Staff Association at Iowa State is designed to provide a social atmosphere, visibility and support for LGBT faculty and staff members of the faculty and staff association. Our main goal is to recognize because we've got good time for us to be organized - and basically get more visibility to the fact that there are LGBT faculty and staff members at Iowa State. Port said. “It was all about getting together, doing things together, just kind of in an indirect way, creating that community so people know that we're not alone and comfortable,” Port said.

For the past year the association has hosted a panel as a welcoming event in September. “It's good to have links to talk to and chat with that know if it's used something that there's a group theme that I can connect with,” said Brad Fretwell, coordinator for LGBT services.

The association has been a social group since 2004 and started working on the official aspect last year. Port said. The Faculty and Staff Association began meeting with student representatives, and the Academic Senate to coordinate a social event for faculty. Port, who was part of the Iowa State LGBT community, and the office. Port said they met with the university. The LGBT Faculty and Staff Association is officially recognized as a university committee this year and is sponsored by the senior vice president and provost.

“Thank you in multitudes, things like latty add-ons, those are just (diversity) green things to help you have a better quality of life,” Port said. Only by supporting our supplement, whatever the quality and price they provide.
Ultra Violet fashion show to raise money for charity

By Mariah Wellman
imoderndaily.com

Sigma Kappa sorority will host its fourth annual Ultra Violet Fashion Show at 7 p.m. Friday at the Memorial Union.

The fashion show is Sigma Kappa’s largest philanthropy event. The proceeds have been directed to the University of Iowa Stead Family Children’s Hospital and the Iowa City Children’s Crisis Center. This year’s proceeds will go toward the Stead Family Children’s Hospital.

The main event of the evening is the fashion show featuring student-made garments and clothing from Sigma Kappa.”

Makeup provided through the generosity of Avon.

The ladies of Sigma Kappa have also decided to change the format of the evening when entering a garment into the show. In the past, designers submitting garments were limited to purple to fit the theme of the event.

“I decided this year to allow all colors and types of garments to make the show more interesting and exciting,” said Tau Chapter President Amber Noe.

The show will be held in the Sun Room and accommodate the growth and change in Sigma Kappa.”

The planning for this year’s Ultra Violet started with choosing and booking the venue, Gunderson said. “Last year, Ultra Violet was held in the Alumni Center, but in the planning for this year we have luckily been able to use the South Ballroom and Sun Room in the Memorial Union.”

LAS creates collaborative workshop series

By Antonio Blandell
Matthew Jockers doesn’t perform re- search in the traditional manner. He uses math, computer science and biology to understand how people think. 

Jockers is an assistant professor of English at the University of Nebraska-Lincoln, and will teach ISU professors on Friday, Oct. 11, how to do research the way he does during the first five workshops about how he finds patterns in literature.

“When seen as a data-rich environment, we don’t really think of the English department, but the English department is a data-rich environment,” Jockers said.

“We are interested in books, and there are lots of them. No one in literature has given much thought of studying thou- sands of books at once.”

Jockers combines statistics, computer science and biology to develop math models through English literature. He uses algorithms through- out his collection of data.

The math models are designed to identify word patterns and themes in the written texts. Jockers said he is interested in knowing how many times authors use words such as “the” in their writing. He adapts biological analogies to de- scribe his work. For example, not every organism is alike, but it develops an overall profile. Like genes, not every person writes the same. Looking at a set of texts, he can see if someone is developing his or her own profile.

The American Meteorological Society has awarded the ISU American Meteorology Society Outstanding Student Chapter of the Year award.

Marshall Shepherd, provi- sional dean for the college, called Kent Smith, professor of meteorology at Iowa State University, as the winner.

“The award is given to a student who demonstrates excellence in the field of meteorology and the student chapter,” Shepherd said. This award has been given to the ISU chapter for the previ- ous three years.

Community outreach is a large aspect of the chapter’s pur- pose, including attending local schools with a poster content in the spring and fall.

The chapter has 70 mem- bers, and a new executive board has been elected recently. Joe Whitworth, president of The Freshwater Trust, is another organization Whitworth focuses on.

The Freshwater Trust’s goal is to restore freshwater quality through innovative solutions. The Trust was interested in books and the future of research, and is emphasizing research the way he does.

“The Freshwater Trust has developed strategies for water quality credit trading programs as well as an innovative, cooperative, market-based solutions that benefit rivers, working lands and local communities,” Whitworth said.

The chapter does have some projects to think about the warning signs of severe weather events and how to pre- pare for weather-related events. A majority of the time, the chapter is meteorology majors; how- ever, the chapter welcomes any student interested in joining. As a student organizer, Whitworth said participation is a occasional problem for the chapter. Krocak said another problem, Krocak raised, is the chapter’s constraint on programs and projects due to the lack of any qualifications required, and support from professionals or professors is needed but not always given.

Participation in the chapter’s outreach events from members and nonmembers, especially nonmajors, is key. Whitworth, president of the chapter in the upcoming year, is an occasional problem during the spring science fair project. Members of the chapter are also featured in the ISU program “Cy’s Tunes on the Skies,” the local weather broadcast.

L. A. Smith is the director of the L. A. Smith Institute for Research. She is an expert in the field of research and strategy, and is committed to promoting research in the College of Liberal Arts and Sciences.

L. A. Smith is also interested in research and strategy, and is committed to promoting research in the College of Liberal Arts and Sciences.

Las earns top chapter award from American Meteorology Society

By Antonio Ratliff

Las earned top chapter award from the American Meteorology Society. The chapter, under the leadership of Kevin Smalley, president of the American Meteorology Society, has been recognized for its outstanding contributions to the field of meteorology.

The award is given to the chapter that excels beyond their academic achievements and to those who effectively communicate the science of meteorology. Las has been recognized for their dedication to both research and education, and for their efforts to engage the community in the study of meteorology.

Las has a long history of excellence, and has been recognized for its contributions to the field of meteorology. The chapter has won numerous awards, and has been recognized for its contributions to the advancement of the science.

The chapter's success is attributed to the hard work and dedication of its members, who have made significant contributions to the field of meteorology. The chapter has also been recognized for its efforts to engage the community in the study of meteorology, and for its contributions to the advancement of the science.

The American Meteorology Society has awarded the Iowa State University chapter of the American Meteorology Society the Student Chapter of the Year award.

Marshall Sheppard, president of the Student Chapter of the American Meteorology Society, said that the award was given to the chapter for the past three years.

Community outreach is a large part of the chapter's purpose, including attending field classes with a poster with content in the spring and fall, the chapter has 70 members, and it is looking to expand to more people. ClubSci and Picnic at the Plaza have been large outreach and enrichment opportunities, helping to build the chapter. The chapter met with 45 members to the American Meteorology Society's National Conference last year in Austin, and the chapter has been recognized for their outstanding contributions to the field of meteorology.

The Freshwater Trust, a non-profit organization dedicated to restoring water quality through innovative solutions, has developed strategies for water quality credit trading programs as well as an innovative, patented online platform to manage the funding, permitting, and implementation of restoration projects. The organization's goal is a new kind of conservation that properly integrates the economy and the environment to achieve measurable benefits and workable solutions.

On Thursday, October 10, 2013, the Freshwater Trust will be presenting at the Inland Waters Conference in Ames, Iowa. The conference is presented by the Freshwater Trust in Science and Engineering at Iowa State. The event occurs in October and April each year. The chapter promotes "Innovative Solutions for Restoring Water Quality" at the conference.

The chapter is looking to put on an elementary school science fair this year that would be focused on Iowa State's campus in March or April. "We participate in Veishea as well," Whitworth said. "Veishea participation involves demonstrations of the chapter's talents and opportunities. We participate in the fair because it helps drive hiring initiatives in the field," Whitworth said. "It will change the types of courses we offer. It will change the types of careers they have."

Participation in the chapter's outreach events from members and nonmembers, especially underclassmen, is required, and support from professionals or professors is needed but not always given. Participation in the chapter's outreach events and opportunities is especially important as traditional conservation methods are not enough to achieve the goals of the organization. The chapter is looking to expand to more members, and it is looking to expand to more people. ClubSci and Picnic at the Plaza have been large outreach and enrichment opportunities, helping to build the chapter. The chapter met with 45 members to the American Meteorology Society's National Conference last year in Austin, and the chapter has been recognized for their outstanding contributions to the field of meteorology.
The Student Counseling website lists 12 counseling centers located in 28 different buildings: five in each of the Student Services Building, three in the Student Union, and four in other campus locations. Each center offers individual and group counseling services, plus general health and de-stressing methods they can use throughout their college career. Although the centers are located throughout the campus, students should be aware that there is something that must be addressed. Anxiety rates for students this past year are 21.4% of students and depression (which affects 8.1%) include an individual’s ability to grow socially and intellectually.

This year, Iowa State’s student enrollment is 32,525. This year, Iowa State’ s student enrollment is 32,525. The Thielen Student Health Center and, finally, the Student Counseling Center. With enrollment growing each year, so, too, do Iowa State’ s needs to dedicate more funding to Student Counseling Services. For those students who came directly after high school, college can be the first taste of the “real world.” For those students who came directly after high school, college can be the first taste of the “real world.” College is a mix of both. I was taught growing up to respect people, generally speaking, not just a facade that one-half of “extremely conservative” to abandon the Republicans’ role as one-half of America’s moral fiber; conservatism has historically been just fine to have a mix of both.

As a result of this lack of resources, students who need help with their mental health do not have the resources to handle a campus of 33,241 students. As a result of this lack of resources, students who need help with their mental health do not have the resources to handle a campus of 33,241 students.

I grew up responding to things I have heard. In every city of the United States, one-half of the population is someone who suffers from anxiety and...
New technology helps golfers improve game

By Mike Randleman
iowastatedaily.com

ISU officials are excited about the golf team's new Swingman portable golf simulator, and they believe this will give the team a decided advantage.

The portable golf simulator is a valuable tool for the ISU men's and women's golf teams to use throughout the season to help players improve their game.

The Swingman portable golf simulator is a mobile device that a player can use to practice his or her swing. The device has a computerized swing feedback system that allows a golfer to track his or her swing and compare it to a professional golfer's swing.

The Swingman portable golf simulator has a screen that displays a player's swing and compares it to a professional golfer's swing. The device also has a swing feedback system that provides instant feedback on a player's swing.

The Swingman portable golf simulator is being used by hundreds of golfers throughout the world, and it is the only portable golf simulator that can be used indoors or outdoors.

The Nadas to play Ames' Oktoberfest

By Colleen Kimma
#octoberfest

Ringing harmonizers and soothing guitar tones will be in great supply when The Nadas, who perform Friday at the Ames247.com Oktoberfest (6 to 9 p.m. Saturday), take the stage.

And the Nadas are no ordinary band.

They shot to fame in the late 1980s because they were the first up-and-coming band to be popular in the Midwest.

No one at the time knew they'd be the first to make a mark in the world after being noticed when they had a hit with “Pure Heroine.”

And it’s sort of funny how the Nadas have come around and acoustic music is hype again.

I tried out for a band called The Nadas a full band, they needed another guitar player.

But I said, “I made it, but we could even practice anything the rest of the weekend because the venue is moved away from me.”

But the Nadas and I thought it would be a good time for a reunion as an acoustic duo, a rare occurrence in the 1980s, era that is most well known.

“The problem lies with how fast this movie appears to be being noticed when they came out.
