INDEX TO VOL. X, RESEARCH BULLETINS
Nos. 122-132

A

"Acidity Changes Associated with the Keeping Quality of Apples Under Various Storage Conditions," by H. H. Flagge and Fisk Gerhardt .......................................................... 341
Experimental data ................................................. 346
Active acidity (H-ion) changes .................................. 346
Relation of total acidity to Jonathan spot ...................... 352
Relation of total acidity to soggy breakdown in Grimes ...... 350
Specific gravity .................................................. 354
Literature cited .................................................. 358
Methods of analysis and expression of results ................. 345
H-ion concentration ............................................. 345
Specific gravity .................................................. 345
Total titratable acidity .......................................... 346
Source and preparation of material .............................. 345
Summary .................................................................. 342
Actinomycetes in soil profiles .................................... 380, 381, 398, 399
Agricultural products, American foreign trade in .......... 6
Exports of .................................................................. 8
Imports of .................................................................. 11
Survey of foreign trade in ........................................ 8
Apples, acidity changes associated with the keeping quality of, under various storage conditions .................. 341
Artificial farm manures, the effect of, on soils and crops .... 197
Artificial farm manures, the production of ...................... 165

B

Bacon, annual exports of, by countries of destination 1881-1928......... 33
Exports of, from the United States ................................. 32, 51
Exports from Denmark, annually, 1910-1928 .................... 37
Imports into Germany annually, 1910-1928 ....................... 38
Imports of, into the United Kingdom ............................... 36
Prices in cents per pound, at Bristol, England ................. 37
Bacterial count in soil profiles ...................................... 378, 379, 396, 397
Bakke, A. L., co-author of "The Effects of Delayed Harvest upon Yield of Grain" ........................................ 301
Bank deposits ................................................................ 259
Benton, T. H., co-author of "Microbiological Studies of Some Typical Iowa Soil Profiles" ........................................ 361
"Biology of the Four-Lined Borer Luperina stipata (Morr.)," by George C. Decker ................................ 125
Common name ....................................................... 134
Comparison of injury with that produced by other borers ........ 132
Control .................................................................. 162
Descriptions .......................................................... 134
Adult .................................................................. 140
Egg .................................................................. 134
Larva .................................................................. 134
Pupa .................................................................. 138
Distribution .......................................................... 130
Economic history ..................................................... 129
Host plants .......................................................... 130
Life history and habits ............................................. 141
Adult ........................................... 153
Emergence ................................... 153
General habits ............................... 157
Longevity .................................... 157
Oviposition ................................. 155
Proportion of sexes and mating ....... 154
Egg ............................................. 141
Development ................................. 142
Larva ........................................... 142
Duration of stadia and length of larval life. 146
Ecdysis ........................................ 143
General habits ............................... 142
Instars ....................................... 144
Insectary records vs. field records .... 151
Preparation for pupation ................. 151
Pupa ............................................ 152
Seasonal history ............................. 158
Literature cited ............................. 163
Methods ....................................... 141
Natural control ............................. 159
Diseases ....................................... 162
Mammals ...................................... 161
Parasitic insects ............................ 159
Predatory insects ............................ 161
Nature of injury .............................. 131
Summary ....................................... 127
Systematic history and synonymy ....... 133
Bjorka, Knute, author of "International Trade in Pork and Pork Products" .... 1
Brown, P. E., co-author of "Microbiological Studies of Some Typical Iowa Soil Profiles" 361
Co-author of "The Effects of Artificial Farm Manures on Crops and Soils" ... 197
Co-author of "The Production of Artificial Farm Manures" ............................... 165
Burnett, L. C., co-author of "The Effect of Delayed Harvest upon Yield of Grain" 301
Butter, methods and results of studying proteolytic activity of S. lactis in ...... 63, 80
Butter, proteolysis of S. lactis in ......... 80, 84
Canned pork, export trade of ............ 41
Circulating notes ............................ 258

D
"Dead heart" ................................... 132
Decker, George C., author of "The Biology of the Four-Lined Borer Luperina stipata (Morr.)" 125
Delayed harvest, the effect of, upon yield of grain .................................. 301
Diplodia zeae .................................. 93
Dust disinfectants for the control of seedling blights of corn ..................... 115

E
"Effects of Artificial Farm Manures on Soils and Crops," by F. B.
Smith and P. E. Brown ...................... 197
Discussion and summary .................... 199
Experimental ................................ 203
Experiments in sand ......................... 203
Carbon dioxide production ............... 203
Nitrification and yields of oats in the greenhouse ................................. 204
Nitrate production .............................. 205
Nitrification ..................................... 206
Yield of oats .................................... 208
Field experiments on Carrington loam—1928 ................. 227
Nitrate assimilation ................................ 230
Nitrate production ................................ 227
Nitrification ..................................... 229
Yield of corn ..................................... 232
Field experiments on Carrington loam—1929 ................. 232
Nitrate production ................................ 233
Yield of corn ..................................... 234
Field experiments on Webster loam—1926 ...................... 215
Nitrate production ................................ 219
Nitrification ..................................... 219
Numbers of organisms ................................ 216
Yield of corn ..................................... 220
Field experiments on Webster loam—1927 ...................... 221
Nitrate production ................................ 224
Nitrification ..................................... 224
Number of organisms ................................ 222
Yield of corn ..................................... 226
Greenhouse experiments on Carrington loam ................. 210
Nitrate production ................................ 211
Nitrate assimilation ............................... 212
Nitrification ..................................... 212
Yield of oats ..................................... 215
Laboratory experiments on nitrate assimilation in Carrington loam ........................................ 209
Historical ............................................ 201
"Effect of Delayed Harvest upon Yield of Grain," by L. C. Burnett and A. L. Bakke .................. 301
Discussion ............................................ 334
Experimental ........................................ 309
Effect of delayed harvest on yield of grain ................ 309
Historical ............................................ 304
Evidence of translocation after harvest .................... 308
Losses occasioned by premature harvest ................... 306
Normal development of the kernel ......................... 304
Introduction ........................................... 303
The most profitable harvest period ....................... 303
Literature cited ...................................... 338
Summary ............................................. 302
Egg production, factors influencing ......................... 237
Egg production, the influence of the date of first egg upon maturity and ................................ 237
Experiment station staff ................................ 54

F
"Factors Influencing Egg Production—II. The Influence of the Date of First Egg upon Maturity and Production," by C. W. Knox .................. 237
Experimental results ................................ 242
Results for the compiled data of four years ............... 248
Introduction ........................................... 239
Literature cited ...................................... 252
Material and methods ................................ 241
Summary ............................................. 238
Foreign trade, American, in all agricultural products .... 6
Four-lined borer ..................................... 125
Fresh pork, annual exports of .......................... 39, 53
Garlock, Fred L., author of "Long Term Loans of Iowa Banks"... 253
Gerhardt, Fisk, co-author of "Acidity Changes Associated with the Keeping Quality of Apples Under Storage Conditions"..... 341

Hadena Stalk Borers".................................................. 134
Hammer, B. W., co-author of "Proteolysis by Streptococcus lactis with Special Reference to Butter Cultures and Butter".... 57
Hog products, American foreign trade in........................................ 13
Volume of exports from the United States.................................. 14, 47
Volume of exports in relation to production................................. 20

"Infection Studies of Diplodia zeae (Schw.) Lev. and Control of Seedling Blights of Corn," by W. P. Raleigh.................... 93
Artificial infection of ears in greenhouse and field......................... 98
Control of Seedling blights of corn............................................ 109
Field experiments using dust disinfectants for the control of seedling blights of corn............................................ 115
Field data on weak plants.......................................................... 104
Kernel and seedling infection..................................................... 102
Literature cited............................................................................. 121
Natural infection of ears............................................................. 97
Spread of Diplodia zeae in curing and storage of seed corn.......... 101
Summary....................................................................................... 96
Temperature and moisture in relation to seedling blight.................. 107
Visible root and sand culture method............................................ 106

"International Trade in Pork and Pork Products," by Knute Bjorka 1
American foreign trade in all agricultural products..................... 6
Survey of foreign trade in agricultural products........................ 8
Exports of agricultural products................................................. 8
Imports of agricultural products................................................. 11
American foreign trade in hog products....................................... 13
Bacon......................................................................................... 32
Canned pork............................................................................. 41
Exports of hog products............................................................. 14
Exports in relation to production................................................. 20
Import duties on hog products in foreign countries...................... 23
Exports of lard........................................................................... 25
Fresh pork................................................................................. 39
Hams and shoulders..................................................................... 38
Imports of hog products............................................................. 25
Pickled pork............................................................................... 41
Appendix...................................................................................... 45
Summary and conclusions............................................................. 4
Iowa banks, long term loans of.................................................. 253

Jonathan spot, relation of total acidity to................................... 352

Kernel and seedling infection of corn with Diplodia zeae............. 102
Knox, C. W., author of "Factors Influencing Egg Production"... 237

Lard, exports of............................................................................ 25, 49
Status of the United States as surplus producer of...................... 31
Loans, maturities of...................................................................... 294
"Long Term Loans of Iowa Banks," by Fred R. Garlock............ 253
Character of the liabilities......................................................... 256
Bills payable and rediscounts ........................................ 266
Bank deposits ................................................................ 259
Capital fund .................................................................. 257
Circulating notes .......................................................... 258
Demand deposits ................................................................ 261
Other liabilities ................................................................ 273
Summary ......................................................................... 273
Time deposits ................................................................... 263
Total deposits .................................................................. 265
United States government deposits .................................. 265
Experience in meeting deposit withdrawals ..................... 287
Short-time reductions in deposits ....................................... 290
Year to year reductions in deposits .................................... 287
Maturities of loans ........................................................... 294
Variation in the deposits ................................................... 274
Relation of changes in deposits to lending practice .......... 285
Seasonal changes in deposits ............................................ 282
Short-time changes .......................................................... 279
Year to year changes in average deposits ......................... 275

Luperina stipata ................................................................. 125

M

Manure, artificial .............................................................. 165, 197
"Microbiological Studies of Some Typical Iowa Soil Profiles," by
P. E. Brown and T. H. Benton ........................................... 361
Experimental results ....................................................... 369
Series I .......................................................................... 369
Results of microbiological studies .................................... 377
Cultivation ...................................................................... 387
Depth ............................................................................ 377
Moisture ......................................................................... 385
Season ............................................................................ 386
Soil types ........................................................................ 388
Series II .......................................................................... 388
Results of microbiological studies .................................... 395
Depth ............................................................................ 395
Moisture ......................................................................... 404
Season ............................................................................ 405
Soil type ......................................................................... 406
Series III .......................................................................... 407
Results of microbiological studies .................................... 415
Depth ............................................................................ 415
Moisture ......................................................................... 416
Season ............................................................................ 417
Soil types ........................................................................ 418
Historical ......................................................................... 367
Literature cited .................................................................. 419
Summary and conclusions ................................................. 363
Milk, proteolytic activity of S. lactis in ................................ 57
Molds in soil profiles ......................................................... 382, 400

N

Nitrate production, see artificial manures .......................... 197

O

Oats straw, effect of different reagents on the decomposition of 172
Oats straw, effect of inoculation on the decomposition of .... 183

P

Patil, V. H., co-author of "Proteolysis by Streptococcus lactis with
Special Reference to Butter Cultures and Butter" ............ 57
Pickled pork, export trade of. ........................................ 41
Plagge, H. H., co-author of "Acidity Changes Associated with the
Keeping Quality of Apples Under Various Storage Conditions". 341
"Pork and Pork Products, International Trade in". 1
Premature harvest, losses occasioned by. ................................ 306
"Production of Artificial Farm Manures," by F. B. Smith, W. H.
Stevenson, and P. E. Brown. ........................................ 165
Experimental ......................................................... 171
The effect of aeration on the decomposition of oats straw. .... 179
The effect of inoculation on the decomposition of oats straw. 183
The effect of different reagents on the rate of decomposition
of oats straw as measured by carbon dioxide production,
nitrogen loss and composition of the artificial manure
produced ............................................................. 174
The use of different reagents in composts and their effect on
the decomposition of the straw. .................................... 172
Historical ............................................................. 170
Literature cited ....................................................... 195
Summary and conclusions .............................................. 167
"Proteolysis by Streptococcus lactis with Special Reference to Butter
Cultures and Butter," by B. W. Hammer and V. H. Patil. 57
Conclusions ............................................................. 58
Discussion of results ................................................ 88
Literature cited ....................................................... 91
Methods used ........................................................ 63
Methods for the trials in butter ..................................... 65
Methods for the trials in milk ....................................... 63
Object of the work .................................................. 59
Results obtained ..................................................... 67
Results of the trials with butter .................................... 80
Proteolysis by S. lactis in butter made in small lots. ....... 80
Proteolysis by S. lactis in butter made under creamery
conditions ........................................................... 84
Results of the trials with milk ..................................... 67
Comparison of proteolysis by a butter culture and by lactic
acid ................................................................. 72
Comparison of the proteolytic action and the rate of
coagulation of S. lactis ............................................ 74
Influence of added peptone or alanine on the proteolytic
action of S. lactis ................................................ 74
Influence of repeated transfers at 37° C. on proteolysis
by S. lactis ........................................................ 79
Influence of temperature on the proteolysis and the rate
of coagulation by S. lactis ......................................... 77
Influence of unfavorable conditions on proteolysis by
S. lactis ........................................................... 75
Influence of varying numbers of transfers in pasteurized
or sterilized milk on proteolysis by S. lactis ............... 79
Relation of air supply to proteolysis by S. lactis and but-
ter cultures ........................................................ 73
Proteolysis by butter cultures in pasteurized milk held
for varying periods ................................................. 70
Proteolysis by butter cultures in sterile milk after three
and six days ......................................................... 69
Proteolysis by butter cultures in pasteurized and sterilized
milk, just curdled .................................................. 70
Proteolysis by S. lactis after different incubation periods 67
Proteolysis by S. lactis after seven days ........................ 67
Proteolysis by the organisms associated with \textit{S. lactis} in butter cultures ........................................... 71
Review of literature ........................................... 59

\textbf{R}

Raleigh, W. P., author of "Infection Studies of \textit{Diplodia zeae} (Schw.) Lev. and Control of Seedling Blights of Corn" .................. 93

\textbf{S}

Seedling blights in corn ......................................... 93
Smith, F. B., co-author of "The Effects of Artificial Farm Manures on Soils and Crops" ........................................... 197
Co-author of "The Production of Artificial Farm Manures" ...... 165
Soil types ................................................................ 388, 406, 418
Soil profiles ............................................................. 361
Spartina, as host plant to four-lined borer ....................... 130
Soggy breakdown in Grimes apples ................................ 350
Stevenson, W. H., co-author of, "The Production of Artificial Farm Manures" ........................................... 165
\textit{Streptococcus lactis} ........................................... 57

\textbf{T}

Translocation, evidence of, after harvest .................... 308

\textbf{V}

Visible root sand culture method of studying spread of \textit{Diplodia zeae} in corn ........................................... 106
