INDEX TO VOL. XI, RESEARCH BULLETINS
Nos. 133-145

A

"A Gene Influencing the Composition of the Culm in Maize," by Merle T. Jenkins and Fisk Gerhardt. .......................... 121

Comparative composition of normal and lazy culms. ..... 130
Collection and preparation of material. ....................... 131
Experimental results ........................................ 142
Chemical ........................................ 142
Microchemical ........................................ 145
Methods of analysis ....................................... 132
Chemical ........................................ 132
Microchemical ........................................ 132
Discussion ................................................ 148
Inheritance ........................................ 127
Literature cited ......................................... 150
Morphological and histological studies with normal and lazy culms 129
Origin and description of the lazy character .................. 126
Relative size and strength of normal and lazy culms ........ 128
Summary ................................................ 124

Agricultural Economics Section, bulletin from ............... 177
Aleurone color, row number and, in maize .................... 267
Agronomy Section, bulletin from ........................... 33, 121, 153
Animal Husbandry Section, bulletin from ........... 1, 65
A. O. A. C. method, butter analysis by the .................. 360

B

"Bacteriology of Butter. I. Influence of the Distribution of the Non-
Fatty Constituents on the Changes in Bacterial Content During Hold-
ing," by B. W. Hammer and R. V. Hussong ................... 17

Experimental ................................................ 22
Salted butter held at 21°C. ................................ 26
Salted butter held at 7°C. ................................ 27
Unsalted butter held at 21°C. ............................... 23
Unsalted butter held at 7°C. ................................ 24
General procedure ......................................... 21
Introduction ............................................... 21
Methods ................................................ 22
Results, discussion of ..................................... 28
Summary and conclusions .................................... 20

"Bacteriology of Butter. II. A Method for the Microscopic Exami-
nation of Butter," by B. W. Hammer and J. A. Nelson .... 105

Derivation of a factor for use in changing from a basis of 1 ml.
of serum to a basis of 1 ml. of butter ....................... 115
Historical ............................................... 107
Literature cited ......................................... 120
Microscopic examination of butter, the suggested method for ... 108
Detailed steps in ........................................ 109
General steps in ........................................ 108
Observations on the ..................................... 114
Uses of the method ...................................... 118

"Bacteriology of Butter. III. A Method for Studying the Contami-
nation from Churns," by B. W. Hammer and H. C. Olson ...... 225
Advantages of the method .................................... 240
Application of the method to equipment other than churns 242
A procedure for studying the contamination from churns 230
Detailed steps in the method for surfaces nearly horizontal 232
Development of the method used 231
General results obtained with the method 240
Methods for surfaces not nearly horizontal 235
Summary 228
Use of the method for yeast and mold counts on churns 241

"Bacteriology of Butter. IV. Bacteriological Studies on Surface Taint Butter," by H. A. Derby and B. W. Hammer 385
Appendix—description of Achromobacter putrefaciens 414

Experimental 393
Additional isolation of A. putrefaciens 402
Attempts to develop surface taint with cultures of the organisms predominating in surface taint butter 400
Attempts to isolate organisms other than A. putrefaciens that would produce surface taint 403
Attempts to produce surface taint with Ps. florescens 409
Bacterial counts and yeast and mold counts on commercial surface taint butter 393
Character of organisms studied that are important from standpoint of the butter industry 404
General changes produced in litmus milk by A. putrefaciens 402
General types of bacteria in surface taint butter 396
Isolation of an organism capable of producing surface taint 400
Microscopic examination of experimentally produced surface taint butter 399
Preliminary attempts to produce surface taint 397
Production of surface taint by holding samples of commercial butter 399
Significance of experimental production of surface taint butter 399
Variations in surface taint 409

Historical 390
Introduction 389
Literature cited 416
Results, discussion of 410
Summary 387
Suggested method for the control of surface taint 412

"Biology of the Stalk Borer, Papaipema nebris (Gn.)" by George C. Decker 289
Artificial control 346
Character of injury 301
Common names 308
Confusion of injury with that of other insects 304
Descriptions 309
Adult 315

N

Nelson, J. A., author of "Bacteriology of Butter. II. A Method for the Microscopic Examination of Butter"
"Nitrate Assimilation in Soils," by F. B. Smith and P. E. Brown
Discussion and summary
Experimental
Part I. The nitrate assimilating power of soil
Effect of varying the amount of nitrates added and length of incubation period
Nitrate assimilating power of some Iowa soils ........ 47
Soil studies ......................................... 45
Solution studies ..................................... 45

Part II. Effect of soil treatment on the nitrate assimilating
power of the soil ........................................... 48
Carrington loam ...................................... 48
Effect of artificial manure and farm manure on nitrate
assimilating power of Carrington loam .................. 51
Marshall silt loam and Grundy silt loam ................. 49
Nitrate assimilating power under the continuous corn and
a three-year rotation ................................... 51

Part III. Nitrate assimilation by soil microorganisms .......... 53
Description of organisms ............................... 53
Isolation of the organisms ................................ 53
Nitrate assimilation and denitrification by pure cultures
of microorganisms ....................................... 54

Historical .............................................. 38
Depressing effect of straw and manure on crop yield ..... 38
Microorganisms capable of utilizing nitrate nitrogen ...... 43
Nitrate assimilation in soils ............................ 40

Introduction ........................................... 37
Literature cited ........................................ 59

Olson, H. C., co-author of "Bacteriology of Butter. III. A Method
for Studying the Contamination from Churns" ............. 225

"Secular Movement of Corn Prices, the," by Geoffrey S. Shepherd ... 177
Appendix ................................................. 213
Conclusion ............................................. 212
Future of corn prices .................................... 203
Prospective future demand for corn ...................... 204
Prospective future supply of corn ....................... 206
Trend of the general price level ........................ 203

Introduction ........................................... 183
Outlook for profits .................................... 210
Period from 1866 to 1919 ................................ 184
Changes in the demand for corn ........................ 188
Feeding methods, effects of changes in .................. 197
Livestock population, effect of changes in .............. 189
Livestock purchasing power, effect of changes in ....... 194
Post-war changes in the purchasing power of corn ....... 197
Demand for corn, changes in .......................... 198
Supply of corn, changes in ............................. 202

Summary ................................................. 180

Shearer, P. S., co-author of "The Inheritance of Color and Horns in
Blue-gray Cattle II" ....................................... 1
Shepherd, Geoffrey S., co-author of "The Secular Movement of Corn
Prices" .................................................. 177

Smith, A. D. B., co-author of "The Inheritance of Color and Horns in
Blue-gray Cattle II" .................................... 1
Smith, F. B., co-author of "Nitrate Assimilation in Soils" .......... 33
Soil treatment, effect of on the nitrate assimilating power of the soil .. 48
Soil, measurement of the degree of saturation of with bases ........ 153
Nitrate assimilating power of ........................................ 45
Stalk borer, biology of .................................................. 289
Artificial control .......................................................... 346
Character of injury ....................................................... 301
Common names ............................................................. 308
Descriptions ................................................................. 309
Distribution ................................................................. 295
Host plants ................................................................. 296
Natural control ............................................................. 339
Seasonal history and habits .............................................. 317
Straw and manure, depressing effect of on crop yields ............. 38
"Supplements to a Milk Diet for Dairy Calves," by C. Y. Cannon .... 65
Experimental work .......................................................... 69
Animals used ............................................................... 69
Feeds used ................................................................. 70
Results, with Lot I .......................................................... 80
Lot II ................................................................. 81
Lot III ............................................................... 87
Lot IV ............................................................... 91
Weights and measurements .............................................. 77
Literature cited ............................................................ 101
Objects ................................................................. 67
Results, discussion of ................................................... 91
Growth ................................................................. 91
Health ............................................................... 94
Review of literature ..................................................... 67
Summary ............................................................... 66
Surface taint, butter ...................................................... 385

Walker, R. H., co-author of "The Measurement of the Degree of Saturation of Soils with Bases." ......................... 153
