Skunk River Navy

Interested in Skunk River Navy?

Contact Joce Cobert at joce@iastate.edu

All Skunk River Navy days begin at 9 a.m. at 212 Buxley Hall.

Transportation may be available.

However, ISU undergraduate students get first priority on transportation in the D1 zone.

Due to conditions of the work, it is nearly inevitable that participants will get wet. Guthke said, "Clothing and shoes are strongly advised."

Volunteers and participants will be picking up trash along nearly three miles of river.

To sign up, contact Joce Cobert or come to the Great Hall of the Memorial Union for the Study Abroad reception Thursday.

Students interested in Study Abroad programs may contact the Study Abroad Office.

Interested in Study Abroad programs?

Contact the Study Abroad Office at 212 Buxley Hall.

Also, students interested in international opportunities should contact the Study Abroad Office.

Politics hinder advances in vital research

The ongoing debate over embryonic stem cell research has made headlines after U.S. District Court Judge Royce Lamberth granted a preliminary injunction. Tennessee Republican Bob McCaskeys eliminating research restrictions puts the issue back on the table.

Federally funding research has been a complicated issue since 1998. The issue is not new.

A few days after conception, a fertilized egg differentiates into a mass of cells known as a blastocyst. The stem cells in the blastocyst are known as the inner cell mass, and are a new frontier of scientific discovery for two reasons: under the proper conditions, these cells can give rise to any type of cell found in the human body, and they are able to propagate indefinitely.

This is valuable for a number of reasons. Closing cells is difficult when cells specialize. Stem cells don't inherently self-destruct. Some adult stem cells can replace other cells, but they aren't sustainable. This web of bone marrow transplants are used to treat blood diseases. The cells from the marrow replace the diseased blood cells, but they can't replace other tissue or cell types.

Pro-life sentiments argued in 1998 to the federal appropriations bill prohibiting the use of federal money to create or destroy human embryos for research. It has been included in every spending bill since 1998. So far, there has been no further restrictions put to stem cell lines produced before August 2001. It was this policy Obama overturned.

Sen. Tom Harkin has introduced legislation to continue the funding, as has pro-life Sen. Fred. Specer. Also, Sen. Orrin Hatch, a staunch pro-life, has been a vocal proponent of stem cell funding.

Embryonic stem cell research has absolu-
tely nothing to do with abortion. Embryos used in stem cell research come from leftover in vitro fertilization. The embryos are already classified as medical waste, and thus are slated for destruction.

The ISU Editorial Board supports legislation lifting the current federal restrictions on embryonic stem research. This isn't because we're godless heathens, just because science.

Science is a revered institution. The only those who believe such research is unethical. Others say that they don't want their tax dollars subsidizing embryonic stem cell research. Because we're godless heathens, we just support science.

The scientific potential of embryonic stem cell research on pro-life grounds is simply mind-blowing. The human embryo is a source of stem cells that haven't more of a person of the sperm and egg cells they came from. The fetal heart beats until the fifth week of gestation, and the rudimentary brain activity takes at least 52 days to begin. If you're still talking about the destruction of potential human life, billions of sperm are released every month just to keep you confused.

The ISU Editorial Board supports legislation lifting the current federal restrictions on embryonic stem research. This isn't because we're godless heathens, just because science.

Science is a revered institution. The only those who believe such research is unethical. Others say that they don't want their tax dollars subsidizing embryonic stem cell research. Because we're godless heathens, we just support science.

Tattoos

The artful expression is worth the experience

By CameronLasey

But as you gaze upon your fresh ink, you may forget that there are more to tattoos than skin-deep ink. They are not just a sign of status, decoration, or personal expression but also something more profound. There is a deeper meaning behind the art of tattooing, one that touches the very essence of our being.

When you first consider getting a tattoo, you may be drawn by the allure of the art itself. You may think of it as a form of self-expression, a way to tell the world who you are and what you stand for. You may see it as a way to remember significant life events or people who have had an impact on your life. In this way, tattoos can be seen as a form of body art that has a deeper meaning and significance.

But as you delve deeper into the world of tattoos, you may realize that there is more to it than meets the eye. Tattooing is not just about the art itself, but also about the process of getting a tattoo. It involves a level of commitment and sacrifice, as getting a tattoo requires time, effort, and pain. It also involves a level of trust, as you are placing your body in the hands of a tattoo artist who will be creating a permanent piece of art on your skin.

Moreover, tattooing is not just about the individual who gets the tattoo, but also about the community that surrounds it. Tattooing is an art form that has been practiced for thousands of years, and it is still a part of many cultures around the world. It is a form of expression that has been used to mark important life events, to honor important figures, and to express personal beliefs and values.

So, when you think about getting a tattoo, consider the deeper meaning behind it. Consider the process of getting a tattoo, the level of commitment and sacrifice required, and the community that surrounds it. Consider the impact that your tattoo will have on your life, and on the lives of others who see it. And most importantly, consider whether you are ready for the long-term commitment that a tattoo requires. Because when you consider all of these factors, you may realize that the deeper meaning behind tattooing is worth the sacrifice required to create a piece of art that truly lasts a lifetime.

**wildcats2cats**

Howard said they "picked up the heat quite early and had 20 points in the first half." He explained how the game was going and commented on the defense towards the end. He also discussed the team's performance overall.

**competitio2p**

The two teams battled it out in front of a sold-out crowd, with Iowa State coming out on top. The Cyclones scored 88 points to the Hawkeyes' 75.

**homep**

Junior defender and co-captain Mary Kate Mahlmann has played a huge role in the Cyclones' defense this season and is looking forward to their next game. She's been crucial in preventing goals and helping her team win.

**interstate2p**

Mountain West Conference announced its 2013-14 football schedule, which includes home games against rival schools like Utah and BYU.

**cy20132015**

Iowa State will kick off its football season with a game against North Dakota State. It will be a crucial test for the Cyclones as they look to improve their record from last season.
ATHLETICS

The sanctuary of athletic sustainability that existed in Ames has been granted EDL 120s and a flood recovery loan just has been priated in the bullpens of the UNI Purple Knights.

The spending cut UCLA athletics program as a whole is economically far more significant than expected. UCLA Athletics has set a target of reducing its deficit to $40 million and is working to achieve that goal as quickly as possible.

The head coaching vacancy at UCLA is the result of a long-term process of assessment that began in 2009 when former coach Rick Neuheisel stepped down following a disappointing season.

The strategy to relieve Iowa State's athletic deficit was the only campus building that was affected by the spending cut. ISU Vice President for Business Affairs Warren Madden. "We cannot operate our athletic department as a self-sustaining auxiliary," he said. The fiscal year 2013 budget was $40,577,950, an increase of $5,208,900 over the fiscal year 2012 budget.

In Ames, ISU Athletics has been profitable for the past 12 years. In 2007, the program was profitable for the first time.
