Government of the Student Body
Knight vetoes presidential account

By Charles O’Brien and Leonidas Vigil

Jared Knight, president of the Government of the Student Body, vetoed last week’s budget change pertaining to the Executive Initiative Account on Monday night. The amended version of Monday night’s veto can be read below before Wednesday’s meeting, was signed compliant. In light of this new information, I am returning the state of the account to the original intent of the senate—urgent funding for student organizations. The senate approved an amendment to the state of the Executive Initiative Account for the career organization accounting, which reviews GSB spending, is currently looking into the account in question. He said the Executive Initiative Account has typically been used for “emergency, office transformation, career opportunities for the Ames area.”

Ames was the destination of a government employee whose reason for visiting will result in new jobs and investments for Ames’ local busi-
ness PowerFilm Solar.

Sharon Burke, assistant secretary of defense for opera-
tional energy plans and pro-
gress, toured the PowerFilm Solar headquarters in Ames on Wednesday, alongside Ann Campbell, mayor of Ames.

The purpose for Burke’s visit to Ames was to lessen the amount of government spend-
ing on fuel items such as gaso-
line and barrels. Burke was having to send fewer funds to troops in foreign war zones. Burke hopes the efforts will prevent (or at least reduce) the waste.

Announced Tuesday, the DOD is giving $5.2 million more to PowerFilm for military-use solar panels and tents.

Chad West, PowerFilm’s marketing director, talked about the display set up in the facility’s second manufactur-
ing building. There were examples of several products and processes are different than other compa-
nies’ panels.

Explaining that the compa-
y’s building uses solar panels that have designed and/or manu-
factured them, West said, “This takes fuel con-
sumption out of the equation,” Burke acknowledged the company’s strong fuel for harnessing pro-
ducts and their work to help the DOD.

At the conclusion of the tour, Burke thanked PowerFilm for the tour and announced the $5.2 million project that will create approx-
imately 20 new jobs in Ames.

Burke and Frank Jeffrey, co-founder of PowerFilm, took a tour around the facility’s second manufactur-
ing building. There were examples of several products and processes are different than other compa-
nies’ panels.

Explaining that the compa-
y’s building uses solar panels that have designed and/or manu-
factured them, West said, “This takes fuel con-
sumption out of the equation,” Burke acknowledged the company’s strong fuel for harnessing pro-
ducts and their work to help the DOD.

Students need as much interest in serving our community

A student, too, can do this by starting small. Though it may seem like a big deal to some, it can be as simple as volunteering your time. People can volunteer in a variety of different ways, from shopping for and delivering groceries to helping out at a library or tutoring children. Volunteer positions can also be found at local non-profits and service organizations.

It’s important to remember that even the smallest contributions can have a big impact. For example, donating clothes or food can help those in need, and volunteer work can help improve the community. By giving your time and talents, you can make a difference in someone else’s life.

PETA games prove effective

I am writing in response to a column that was written in The Iowa State Daily. It focused on the fact that people should not kill any animals for any reason.

I think this is an important topic. People should be aware of the millions of animals that are killed each year for food, clothing, and entertainment. It is important to consider the impact that our actions have on these creatures.

I would like to hear your thoughts on this topic. Have you ever considered the impact that your actions have on animals? How can we work together to make a positive change?

All-Americans Meghan Nelson and Betsy Saina displayed another dominant performance this past weekend at the Wisconsin Adidas Invitational. The two seniors led No. 5 ISU to its third straight national meet, and they definitely have the focus and credentials to do so.

"People don't realize how individual our sport is," Saina said. "You can't transfer everyone together because each competitor needs a little bit of recognizable times — their coach has gotten accustomed to what they are very steady. Betsy really wants to win the national meet, and she definitely has the focus and credentials to do so."

Common cafe concoctions in your cup: feature flavorful varieties to savor

By Lindsay MacNab

Drinks

Caffe Americano: A shot of espresso infused with water. A classic Americano is nearly the same as a shot of black coffee, but it often uses regular coffee instead of espresso.

Cafe latte: A French term for coffee with milk. This drink consists of hot coffee made with foamed milk. The absence of espresso gives it a lighter taste.

Cafe breve: A milk-based espresso made with half hot and half steamed milk. Cafe breve is rich and creamy and is also more foamy than the typical latte.

Cafe mocha: A popular coffee drink, a cafe latte is a mixture of espresso with steamed milk (about 1:3 ratio).

Cafe macchiato: Italian for “marked,” this drink consists of espresso topped with a small amount of steamed milk and chocolate syrup. White and dark chocolate varieties are commonly available.

Cafe vanilla: This drink features honey, vanilla, and espresso.

Cappuccino: Contains more than a cafe latte. The espresso is 1:3 steamed milk and 1:3 frothed milk.

Caramel macchiato: Similar to a cafe mocha, this drink is made with chocolate syrup instead of dark/white chocolate syrups.

Cafe Americano: A shot of espresso mixed with other coffee ingredients.
