Resource Fair showcases opportunities, student clubs
Organizations promote diversity around campus
By Isabell Uhr / @isabelluniversitydaily

The walls of the Iowa Memorial Union on March 26 were lined with representatives from student organizations and resources dedicated to supporting and promoting diversity on campus for the first Diversity Resource Fair. From 11 a.m. to 3 p.m., representatives from various organizations stood by tables with posters, brochures, and pamphlets, holding information and stories to tell about their experiences with the organization and resources they offer.

"Living in Iowa without a lot of diversity is you can see some different perspectives," said Human Affairs, Hodges in Chemical engineering.

Celia Siewpaul, sophomore in art education, said she heard about the event through a class she took for her scholarship. She came to the fair to learn about all the resources available to students -- not just diversity, but for everyone.

"It's nice to see diverse groups being represented. Those who attended the event now have the power to tell people about the resources and organizations available, and hopefully the word will spread," said Brandon Jones, freshman in civil engineering.

Each group that presented was anxious about the resources and organizations they offer.

"It's nice to see diverse groups being represented. Those who attended the event now have the power to tell people about the resources and organizations available, and hopefully the word will spread," said Brandon Jones, freshman in civil engineering.

Engineers work together with University of Perugia professors

Students collaborate to improve concrete structures

By Kelly Schiro

The future where people can control the structural integrity of buildings, roads and bridges is coming to the University of Perugia in Italy. People can monitor the health of concrete structures through vibration signatures. Each bridge is a unique structure that has a unique vibration signature.

Three in running for gubernatorial race

To debate in June primary

Gov. Terry Branstad will face Zin Ho Flooding at the GOP primary on June 3. Jack Hart leads the polls in June primary of the upcoming gubernatorial race. The Iowa State Board of Elections along with the faculty of the University of Perugia will host this competition. All candidates will have to gather a minimum of signatures from political parties.

Carol Chausky, 21, junior biology major, Senate Student Assembly member and candidate for the Democratic party in the June primary of the upcoming gubernatorial race.

Chausky said in the June primary that she would be on the GOP primary ballot. Chausky said that she is running for the Democratic party in the June primary.

Chausky is a junior biology major at ISU and on the Democratic party in the June primary of the upcoming gubernatorial race. Chausky said that she is a biology major at ISU.

Chausky said that she is a biology major at ISU. Chausky said that she is running for the Democratic party in the June primary of the upcoming gubernatorial race.

Undergraduate and face difficult understanding TAs

By Katherine Greenwell #kgreenwell@gmail.com

In the spring and fall semesters, 3000 students went through Biology 211 and 222 and the lists connected to these courses. This can require a member of the biology department to work with as many as 40 to 50 students in the classroom, as well as 20 to 30 outside of it. These students, who are typically fourth-year students, are required to work with their adviser to plan this course. This can be a challenge for some students, as well as for the TAs who work with them.

Through this program, selected students are assigned to TAs and their adviser. This is done to help ensure that students have someone to help them understand the material and work through any questions they may have. The TAs are also given the opportunity to work with a group of students who are typically more advanced in their studies.

The knowledge of material and the ability to communicate it are important for TAs, who are often the first point of contact for students who have questions. Additionally, students can also learn to work with their TAs to help them understand the material and work through any difficulties they may be having.

TAs are also given the opportunity to work with a group of students who are typically more advanced in their studies. This can be a valuable experience for them, as it allows them to work with a more diverse group of students and to help them understand the material.

Iowa policies work to protect water systems
Everything in Iowa seems to slow down over the winter months. Fields normally packed with crops and the humans and their animals become sluggish and our waterways become little more than a muddy puddle. That is all about to change.

With spring finally arriving, Iowans will once again be able to enjoy full recreational use of our waterways. Many of us will begin filling our days with sporting clays, hunting, and other outdoor activities Iowa has to offer. Our streams and rivers have also returned to life, showing a spring surge of growth, vigor from thawed land and melted snows. Our waterways become not just a murky brown but a vibrant green of life.

As the months of winter give way to spring, Iowa will once again be busy putting our land into full production, and our waterways become little more than a muddy puddle. Fields normally in waterways, seem to lose sight of the larger, more important picture. The EPA's standards for nutrient concentration are unquestionably tailored for Iowans. There is a lot of work to reform this legislation that a lot of other states need to be going in.

Iowa is going in a direction that many of us will begin filling our days with sporting clays, hunting, and other outdoor activities Iowa has to offer. Our streams and rivers have also returned to life, showing a spring surge of growth, vigor from thawed land and melted snows. Our waterways become not just a murky brown but a vibrant green of life.

Gymnasts confident about regionals

By Rachel Anderson

Lexi Slater is confident the Cyclones will be able to compete with the region’s top team when they enter regionals this weekend.

"I think there’s no stopping us … our team is in pretty good physical shape right now," said Slater, a sophomore defensive back. "We’re in pretty good physical shape right now, and we’re in pretty good condition. We’re just working on a few things we need to improve on."

Iowa State will enter regionals with a 12-3 record, having scored 12 runs on the season. The Cyclones will be allowed eight dual meets, losing to TCU, Iowa and against South Dakota State, South Dakota St.

The Cyclones started the season well in terms of their performance, but now that we’ve beat some ranked teams in No. 3 LSU, No. 10 Stanford, No. 13 Auburn and No. 21 Arizona.

"I just want to go down there and hit the ball," Slater said. "I know everyone else has some high quality gymnasts and they will be bringing it.”

Iowa State faces the top three Big 12 teams in the region this weekend. Those six teams, though, came in six separate meets. Facing four top-25 teams at once will be a whole new animal.

"If we go out there and do our best, I’m all for it," Slater said. "If we go out there and do our best, we will be able to compete and I feel like we can do it."

Slater is confident the Cyclones will be able to compete with the region’s top team when they enter regionals this weekend. "I think there’s no stopping us … our team is in pretty good physical shape right now," said Slater, a sophomore defensive back. "We’re in pretty good physical shape right now, and we’re in pretty good condition. We’re just working on a few things we need to improve on."
Wertz returns to M-Shop, promises exciting show

By Michael Zannon
@Iowastatedaily.com

Solo rock artist Matt Wertz is set to perform at 9 p.m., Saturday in the Maintenance Shop with pop-rock band My Red & Blue as an opener.

Wertz returns to M-Shop, a singer-songwriter hailing from Liberty, Miss. With several records under his belt, he has shared the stage with acts including Ben Folds, Lee Ann Womack and Gusto Duggan.

"It's singer-songwriter pop music," Wertz said. "Growing up, we were kind of a family where a lot of times we would sing together. Sometimes that was in the car or at home. Singing at home Staying was very much a part of what happened around the house."

"When I became a teenager, I was looking for a way to express myself, and music was there. I think it was a natural outlet for me to want to do that. Early on, I was exposed to Michael Jackson. Everything from the way he moved, the performances and everything. I think that had much more with and everything that I think that I was able to look into that I think that I would be a stage performing in front of people. It's about a dream come true to get to do that."

While Wertz grew up in a musical household, he originally wanted to be a shoe designer. It was not until his freshman year of college that he seriously consid-

ered pursuing a career in music.

"Recording the first albums, I had a band in college," Wertz said. "My junior year of college was our spring break and we staked around. There was a lot of University of Missouri and University of Iowa going on back then. It was just because my bandmates and I were able to have the time to travel because everybody was out and school." While recording the first album, Wertz had to overcome a learning curve as he went through the process for the first time.

"The first recording was all a big great time. It was very fun, experi-

encing how we had no idea what we were getting into. We were very limited knowledge wise, and we didn't have the kind of resources to work on it or to look perfect. We pretty much had to step out when we ran out of money. Thankfully, you get better over the years, and you also have access to folks who are more professional and inter-

ested. The recording process has gotten easier. Wertz said.

"The first album was a huge step. That first album played on-stage with iconic singer-song-

writers of the late 1980s — some of those guys. I liked the way those albums sounded, and we just kind of bombarded some of those sounds, the guitar sounds, a lot of drum machines, sounds like that."

Matt Wertz is familiar with the Maintenance Shop and is ex-

cited about some of the ben-

efits a smaller venue can offer.

"I've played the Maintenance Shop several times before and I've really enjoyed it," Wertz said. "I like playing in smaller venues. It's like playing in any venue that feels filled and packed. It's rare, there's an intimacy that comes from that and you kind of get to just enjoy a huge show and get bar, and forces you to get to know the audience a lot more." Wertz shares a friendship with mainstream pop artist Ryan Tedder, a songwriter and producer, known as the lead singer for the pop-rock band OneRepublic.

"Ryan Tedder is a friend of mine, and I've just been really amazed by his rise over the last ten years. He's probably one of the best work ethics in pop music today. He's just constantly working non-stop. "Tedder got, Wertz said.

"Tedder," Wertz's most recent record, was released in August, 2013.

"I wrote 'Heatwave' between the years of 2011 and 2013, and I started recording it in 2012, and finished it up in the summer of 2013." Wertz said. "It's heavily influenced by the sing-

er-songwriters of the late 1980s — Steve Adam, Richard Marx and a few others — some of those guys. I liked the way those albums sounded, so we just kind of bombarded some of those sounds, the guitar sounds, a lot of drum machines, sounds like that."
