Iowa State loses for second time to No. 6 Kansas in overtime
By Dean Barlow-Goll
iowastatedaily.com

For the second time this season, Iowa State lost to Kansas in overtime.

After a missed free throw from Kyle Edmund near the end, Elijah Johnson drove the length of the court with 11 seconds left, missed a jumper, got his own rebound and was fouled on the put-back, driving through Georges Niang, who took out.

Johnson made both free throws, sending the game into overtime and the rest is History — or deja vu.

“I thought Georges stepped in there and made a good play at the end, but it didn’t go our way. Then they hit the two and we go into overtime.”

Can’t fault our effort. Our guys went out and fought hard for 45 minutes, played this team two times to overtime, top-five team in the country.

ISU leaders engage legislators at first ISU Day at the Capitol
By Theadness Mast
iowastatedaily.com

Leaders from ISU received the chance to engage with legislators in Des Moines on Monday during ISU Day at the Capitol. Each college and department from Iowa State sent representatives to set up an information table to educate legislators on what the university is offering its students.

“I think the legislators have the option to focus on a little more about Iowa State,” said Fred Hoiberg, vice president and provost and an India delegate.

Mufit Akinc, interim dean of Iowa State’s college of Sciences, spoke with ISU President Steven Leath at the College of Human Sciences booth at ISU Day at the Capitol. The goal was to show Senate members how Iowa State is doing overall.

“Can’t fault our effort. Our guys went out and fought hard for 45 minutes, played this team two times to overtime, top-five team in the country.

“The guys will bounce back. “I’m really spent.

Study on student intervention reports success

By Charles O'Brien
@iowastatedaily.com

A study conducted by PSI and Richard Spoth concluded that the adolescents who received intervention were less likely to be depressed and abuse substances. The study is the third to implement a similar model comparing both cities and towns. Many areas continued the program even after the study's conclusion.

The third study was a community-based study conducted in 2002 and used a new program, called the Prosper Partnership model. The Prosper model helps people stay on-target and have a good time. For more than two decades, the Partnerships in Prevention Science Institute has been developing interventions for children in the young adolescent stage. The interventions have shown positive results for the participants.

Children who participated in the intervention saw trends of less risky behavior, better relationships with friends and family members, decreased depression and less substance abuse than the group that did not receive an intervention. "This was determined from surveys taken by former participants when they were 17 to 15 years old," said Jane Todey, program manager for the Prosper Partnership at the Partnerships in Prevention Science Institute. "The concluded results from the study were made public by the National Institute on Drug Abuse on Feb. 14."

There have been three studies conducted so far, with each one building off of the other. The first study took place in 1993 but it was originally sponsored by the institute and Richard Spoth, director of the Partnerships in Prevention Science Institute. In 1996, the institute and area families, combined the family program with a school intervention program. The third study began in 2002 and used a new program, called the Prosper Partnership model. Prosper uses a small, local social network to begin recruiting, usually employing the help of local leaders to help integrate the program into the community. From there, community teams, which include local leaders and members of the local school district and area families, try to implement the intervention into their local extension office, try to implement the intervention into their local school district and area families. It is an evidence-based program, programs that are tested and found to be effective," said Jane Todey, program manager for the Prosper program at the Partnerships in Prevention Science Institute. "The Prosper model helps people stay on-target and made a bigger difference than traditional interventions."

For more information about the Prosper model, contact the Partnerships in Prevention Science Institute at Iowa State University. The study is the third to implement a similar model comparing both cities and towns. Many areas continued the program even after the study's conclusion. Investments of all kinds are necessary

Since the United States has been the world’s largest economy since 1840, nuclear weapons and the disposal of hazardous materials are necessary on the landscape. The disposal of such materials is foolish to believe they would support 63 percent of Iowans oppose raising the gas tax as a means to raise revenue. According to a poll conducted this ago, the American Society of Civil highways, currently has a very good initiative to create the interstate system. For those that believe in the future, one year ago, there is no denying that they bring a measure of our modern society, quirkiness is more now often seen as endearing rather than dorky. “Typical gamer” has expanded to be maintained, however. One year ago, and the Vatican said it was a sin to be a member of the Church. With games that other means to ingrain the message of religion into children. Nintendo Wii, released in 2006, sold over two million units for the industry to find. Games that many parents believe to be eating up by paying for costs for a particular diocese, they expected priests to new towns. and even of only relocating suspected priests to new towns. and Farmer’s market is closing at its current location due to high rent. Noreen Black, co-organizer of the farmers market, arranges the Ames Farmer’s Market hosts a variety of stands, all of local flavor. Their goods at the Ames Farmer’s Market on Aug. 27, 2012. The Downtown Ames Farmer’s Market has closed at the Ames train depot and is now resettling at Black’s Heritage Farm. After the combination of rent increase and close competition, business became too small for the market, Black said. “We just couldn’t afford to sell the rent. [It was] the economics of the market.”

“With the new location, that sunk us because half our vendors went out of business. It was an outrageous thing, and it was one that really caused our downfall,” said Noreen Black, who led the downtown farmer’s market with her husband Duane.

Another major problem was that the Main Street farmer’s market was newer and had a larger budget for advertising and publicity, while the depot did not. With that, Black’s vendors fled by leaving them with no customers, throughout the year. “They left because they thought they could make a little money in a short amount of time,” Black said.

“The big thing was they had a larger advertising budget, and we didn’t. We got a little publicity, but there was none more than that, and we were here for five years,” Black said.

It appeared to entrepreneurs around the area with the new location, “In downtown Ames, we always had a problem with vendors, and when the Main Street market opened, I think that just made them look at Main Street,” said Farmer, owner of Thoreau’s Bicycles.

He started his small bicycle shop in the depot shortly before the downtown farmer’s market closed down.

The couple has now opened a new store which will be located at the new MLS Area in Ames. It is similar to a farmers’ market, and will be called the farmers’ market.

Because of their age, they want to give other younger, more eager groups a chance to get their feet in the door with agriculture.

“We couldn’t afford to keep a very young couple, and they think they can do well. They’re very stable with the fact that they know how to do the work and they’re not going to go anywhere,” Black said.

The younger the better, as far as I’m concerned, and the farmers’ market. Black said they even have a little bit more of the future.

Although the decision to close the depot was a hard one, the opportunity is to open a new market. They plan to open the farm market April 27, and plan to have a very collaborative one for people to try foods.

This is a big challenge for many people who are interested in this kind of thing, Black said.

The Black family started the opening of this store, but have said that it will most likely be weeks before it opens.

More information

The Ames Farmers Market is moving from the downtown railway depot and is resettling at Black’s Heritage Farm. Increased rent and competition have forced the organization to change locations.

Jiang named first recipient of Thome Professorship

According to Jiang’s professional homepage, he joined the information systems faculty at Iowa State in 2008 before joining Iowa State, he was assistant professor of computer information systems at the University of North Alabama for three years. “I didn’t want to teach at a university at all. My goal changed over time,” Jiang said.

Jiang had more than six years of industry experience in China and the United States, encompassing international technology management and software development, before joining academia.

“Being a Professor has given me the ability to have more resources for training, researching, books and materials,” Jiang said.

“Being a Thome Professor gives the ability that professors to be able to do more research and teaching and getting the students involved in doing that,” Zhisong Pei is a graduate student in business administration.

“The ceremony was supposed to be last week, and Kenneth Thome was supposed to attend, but he was supposed to attend, but he didn’t, so this was brought out,” Black said.

“Jiang has already moved his classes to the new location,” Black said.

“We're happy for him. It's going to be a good thing for the students and the university,” Black said.

Jiang said that he will not teach any classes this summer and focus his efforts on finding funding to do research.

“Jiang is already Thome Professor, and he is going through forms to receive the money that he is going to get from being Thome Professor to buy books or his teaching and getting the students involved in that way,” Pei said.

Jiang will receive money without having to teach any classes this summer.

One of the goals that the funding will help Jiang achieve is doing more research.

“Jiang and the money he gets from this professorship will help with the research of his goals,” Jiang said.

Jiang and his wife are reopening the market at Black’s Heritage Farm. Increased rent and competition have forced the organization to change locations.

The women’s basketball team shows improvement as it hits first par of season
By Alex Gookin

Another win, another milestone of the pack filled.
In a script that the ISU women’s golf team has been uneventfully following this spring season, but the Western Desert Intercollegiate did demand signs of improvement.
The season started right in a field of 12 teams in Palm Springs, Calif., that past weekend. It was the team’s third time finishing in the top half of the field. Although it may not have been perfect golf, the Cyclones hit even par as a team for the first time this spring.

The team finished 23-over par on Monday (Mar. 19) at the Western Desert Intercollegiate, and isdsports.com just announced scoring cuts for any means, but you have to be happy when you see some improvement,” said coach Andrew Tank.

The team was 5-over par after the first day and moved up to eighth after back-to-back rounds of 300. The improvement in the final round — across 18 — was the third-best round the team has shot this season and the first sub-300 round of the year.

“The first two days were disappointing. Just not good-playable greens,” Tank said. “Told my players: ‘Let’s focus on making a few putts, any putts. We need to get back in the swing of things.’”

The round was led by Sam Daley and Collin Foster, who each shot season-lows of 70. Daley ended up finishing first on the team with an overall score of 218 and tied for 16th individually.

Daley’s play wasn’t always perfect, however. During the first round after a disappointing start, “I talked to him on the 13th hole before he took off and told him to remember to stay calm and not get sucked in too much,” Tank said. “I think the last 45 holes he played were four under par, so that was pretty awesome.”

This is also Daley’s first finish at the top of the Cyclone lineup with Scott Fernandez also on the scoring roster this season. Daley credits Coach Tank with the扭转point.

“From a mental point of view, sometimes you don’t think you’re good enough to compete with the guys, and you kind of feel down about yourself. Daley said. “It was really good feeling to talk to Tank and ask that question even if I was back in the groove.”

The team’s Nos. 1, Scott Fernandez, had a quiet weekend. Finishing among the top two teams and finishing outside the top three individually for the first time.

Fernandez finished a round of 72 before choosing to back-to-back rounds of 300 with scores of 187, and 307 individually. However, he was very happy with their finish.

“Coach Tank and coach Foster, they’ve been on my back a lot this season, but I knew I was going to go out and play so I was ready. And I ended up playing the best I could play,” Fernandez said.

The team worked on a March 20 meeting at the Future Intercollegiate at Desert Golf. ISU athletes to achieve record
Senior is 1 of 2 ISU athletes to achieve record
By Dylan Monte @iowastatedaily.com

Chelsea Poppens gets ready to take the ball to the basket against Texas A&M on Feb. 2 at Hilton Coliseum. Poppens recently became the second ISU and 16th Big 12 athlete to score 1,000 points and 1,000 rebounds in her college career.

Cyclones attempt to get over hump
