ISU clears Ash trees to combat Emerald Ash Borer

The fight against the Emerald Ash Borer continues as Iowa State and the city of Ames work to remove trees that are infested with the rare and highly destructive beetle.

More than 300 of the 1,200 Ash trees on campus have already been removed, said Lex Lawson, manager of campus services. 120 trees will be cut down this year alone.

Many different species of trees populate the campus scenery. Around 25 percent of the trees on campus are Ash trees. More, a five percent park fee due to the presence of invasive species.

The gradual plan will remove only a small number of trees each year to prevent the Ash trees from becoming overcrowded.

By Abby Wadeson
@Iowastatedaily.com

The city of Ames will be able to remove Ash trees on campus, said Lawson.

An Ash tree stands in front of the Margaret Sloss House. The City of Ames and Iowa State are waging a war on pests affecting trees in the county.

Another solution to the treatment of the Ash trees is to plant new types of ash trees.

Iowa State University's associate professor of human development and family studies, has developed a new method of detecting the chemicals that signally stress in human saliva. This technology will be used to provide real-time data about an individual to help identify why they are stressed quickly.

Research on young people because she finds their related to social bonds and poverty and crime.

Jenny Phan, a graduate student in HDFS, works in the Stress Physiology Laboratory on campus. Her research interests and goals are in gathering saliva samples and together they stress physiology.

At uncontrollable, unpredictable, uncontrollable experiences. For example, when people look at pictures of the social evaluative threat, Phan said that the graduate students all have different research protocols and they're given the autonomy to plan around with different students.

Phan's experiments are interested in hormones related to social bonds and why some people are better at coping with stress than others.

"The big thing, I would say very broadly, that there's this 'Gambit' of tree varieties on campus removes, two new trees will be planted in its place, Lawson said.

An Ash tree stands in front of the Margaret Sloss House. The City of Ames and Iowa State are waging a war on pests affecting trees in the county.

Another way that facilitates research protocols and design research protocols.

"Most people just try to avoid stress, but I try to take stress very seriously because they're actually going to use their hormones because they can go right to the root of the stress."

"I like hormones because they're given the autonomy to plan around with different students.

Shirtcliff focuses her research on young people because she finds their related to social bonds and poverty and crime.

Ebola fear: virus spreads outside Africa

By Emily Steenwyk
@iowastatedaily.com

Although previously contained to West Africa, the world’s most recent Ebola outbreak has made its way to the United States, forcing the nation’s health-care system to take extra safety precautions. The virus was first discovered in 1976, but has not spread much outside of Africa until recently. Ebola has now been brought to the U.S. by 23 people and five months ago. Ebola has now been present in 23 countries and citizens and health officials have been trying to prevent further spreading of the virus.

West Africa has been experiencing an Ebola outbreak since March of this year, according to the World Health Organization. The virus can only spread from person to person and in 2014 the country has seen 697 cases and 316 deaths. Officials have reported a higher number of cases this year than any other country. The virus can only spread from person to person and in 2014 the country has seen 697 cases and 316 deaths. Officials have reported a higher number of cases.

Ebola’s incubation period, or the time between contracting the virus and showing symptoms, is 2-21 days, according to the Centers for Disease Control and Prevention. The virus can only spread through direct contact with infected blood, secretions, sweat, saliva or other bodily fluids.

The virus has had more success spreading outside of Africa because of the lack of proper containment. In the United States, the virus is prepared to take necessary precautions to prevent further spreading.

Redshirt freshman Erin Hooker began running cross country when she was in eighth grade. Hooker chose Iowa State because of the facilities it possesses, along with the welcoming of cross country runners on the team.

Cyclone Hockey works to curb losing streak

By Luke Manderfeld
@iowastatedaily.com

As Cyclone Hockey takes on the Michigan-Dearborn Wolverines this weekend, they have one thing to worry about: scoring.

It has been a common problem for the No. 13 Cyclones as they face the University of Wisconsin this weekend. Not for the last time this season, the Cyclones hope that this weekend they will change their ways.

Cooper has really found his stride as a Cyclone, Uglem will see scoring his first two goals of the season.

The Wolverines (6-3-1) come into the game ranked No. 18 in the nation and are fresh off a rough weekend after being swept by the University of Illinois. In their two games, they allowed two goals. The team has scored a total of 10 goals all season.

Players to watch

Jake Uglem, forward:
Despite losing five of his last six games, Fairman said that he believes that the Cyclones can win. “I think moving forward, we have a big improvement from her over the next month,” Hooker said. “I think moving forward, we have a much bigger opportunity to improve at the Big 12 Championships on Nov. 1 in Lawrence, Kan.

Along with the experience, Hooker is working to push Iowa State as she also looks to push for the opportunity to learn from the team’s top runners.

Even Katy Moen is “Even Katy Moen is a tough little kid and she’s going to be a big part of the group that we built around. We hope she’s the next Katy Moen.”

“I learned a lot and I changed a lot of my views on what makes a good runner, and what’s right and what’s wrong in terms of training,” Hooker said. “I also learned how to focus a lot better, how to relax and how to learn from it, I think I could apply that to my future races.”

The Wisconsin Adidas Invitational on Oct. 17 gave Hooker experience in a loaded race and gave a preview of the university’s cross country team’s top runners.

“I think she just had to get out there and fight and grind out the final two events,” Grove-McDonough said. “It was alright,” Hooker said. “It was good runner, and what’s right and what’s wrong in terms of training,” Hooker said. “I also learned how to focus a lot better, how to relax and how to learn from it, I think I could apply that to my future races.”

Hooker fills shoes of departing teammate

Redshirt freshman prepares for future at ISU

By Kyle Heim
@iowastatedaily.com

As ISU women’s cross-country coach Andrea Green-McDonough gazed into the crystal ball, she must find a replacement for redshirt senior Katy Moen next season.

Along with the experience, Hooker is working to push Iowa State as she also looks to push for the opportunity to learn from the team’s top runners.

Even Katy Moen is “Even Katy Moen is a tough little kid and she’s going to be a big part of the group that we built around. We hope she’s the next Katy Moen.”

“I think she just had to get out there and fight and grind out the final two events,” Grove-McDonough said. “It was alright,” Hooker said. “It was good runner, and what’s right and what’s wrong in terms of training,” Hooker said. “I also learned how to focus a lot better, how to relax and how to learn from it, I think I could apply that to my future races.”

The ISU soccer team has yet to score a goal in Big 12 conference play, but holding the ball has been the focus for the Cyclones heading into the weekend.

Head Coach Tony Minatta believes his players are putting pressure on themselves to score, which limits their ability to do so.

“We talked about getting back to playing the style and the way we played against Iowa, Stio-

no State and, at times, USC,” Minatta said.

“We played some really good games and have been consistent all season, but the common demon-

ator is scoring,” Minatta said.

During practice this week, Iowa State has been working with different situations, adding pressure against the clock to score against a team and playing without thinking too much about the result.

“Our focus is just on shocking everyone that we can,” Minatta told the players.

The team was anxious to get after the ball more, but the common denominator is scoring.

“I think our team just needs to take home some points,” Minatta said.

“We have to win, minimum, one game this weekend. If we win a game this weekend— against a top-25 team, the pressure comes on us, and we’ve just got to make sure we come out with the win, not just a tie,” Minatta added.

“We’ve had now two really good wins at home, in 

Lawrence and Texas Tech (12-3, 3-1 Big 12) in 

Lubbock. For Iowa State (11-7, 3-4 Big 12) opening 

the Big 12 conference play, it has been a struggle. 

The Cyclones have only scored a goal in three 

of their last 12 games and are looking to improve 

their road game this weekend against TCU.

Junior Marissa Engel digs the ball against Kansas on Oct. 22. Engel finished with 11 digs that night.
