INDEX FOR BULLETINS 251-259
VOLUME XXIII

A
Agricultural Economics Subsection, bulletin from..................49, 317
Alfalfa hay. See “Curing and storage of alfalfa hay”.............. 1
Ammonium thiocyanate, use in control of European bindweed... 403
Appraisal of land ................................................................ 49
Correlation of depth and slope with yield ......................... 67
Atiacide, use in control of European bindweed..................394, 399

B
Bakke, A. L., author of “Experiments on the control of European
bindweed” ........................................................................ 365
Bakke, A. L., joint author of “Relation of root reserves to the
control of European bindweed (Convolvulus arvensis L.)” .... 113
“Balanced incomplete block and lattice square designs for test-
ing yield differences among large numbers of soybean varieties,”
by Martin G. Weiss and Gertrude M. Cox ....................... 289
Balanced and incomplete block designs ......................... 294
Efficiency factor .......................................................... 304
Example of balanced incomplete block design .................. 300
Lattice squares (quasi-Latin squares) ..................... 305
Example of lattice square experiment .................... 307
Precision of lattice squares .................................. 312
Summary ........................................................................ 291
Baling alfalfa hay from the field .................................. 33
Bindweed, European, botanical description .................. 372
Bindweed, European, development ............................. 373
Bindweed, European, spread ..................................... 377
Bindweed, European, experiments on the control of .......... 379
Chemical treatments ................................................. 380
Cultural practices .................................................... 421
Grazing ........................................................................ 436
Light exclusion ......................................................... 438
Bindweed, European, root reserves in relation to control .... 113
Botany and Plant Pathology Section, bulletin from ........ 113, 365
Butter as compared with other fats for use in plain cake .... 193
Butter culture, acid production from, historical ............. 221
Contaminating organisms ..................................... 224
Effect of abnormal milk ........................................... 223
Explosive type of outbreak .................................... 226
General observations .............................................. 221
Germicidal property ................................................ 223
S. lactis ................................................................. 226

C
Cake, plain. See “The physical and chemical characteristics of
lards and other fats in relation to their culinary value II. Use
in plain cake” .......................................................... 145
Carbohydrates, fermentation by sensitive and non-sensitive strains
of S. lactis .......................................................... 280
Carbohydrate reserves of bindweed roots .................... 129
Chemical treatments to control European bindweed ........ 380
Chlorates, use in control of European bindweed........ 391, 394, 399, 402
Chlorate treatment of bindweed, effect on root reserve........ 124
Chloron, use in control of European bindweed........ 418
Competitive crops, use in control of European bindweed...... 429
Contamination of milk, effect on rate of acid production.... 229
Corms, gladiolus, influence of corn characteristics on growth and
flowering ...................................................... 81
Corn oil compared with other fats for use in plain cakes...... 193
Corn, power and labor expended in production of................ 354
"Cost and utilization of power and labor on Iowa farms," by
Wylie D. Goodsell............................................ 317
Comparison of organization and management on farms
matched for size and for amounts of livestock but operated
with different types of power.................................. 343
Comparison with respect to certain selected factors of
matched farms .................................................... 344
Cost varies with length of time a given type of power
has been employed.............................................. 344
Influence of type of power on crop yields.................... 347
Livestock enterprises and sources and amounts of in­
come on farms operated with different types of power.... 349
Cost of operation of horses, tractors and trucks............. 325
Cost of operating farm motor trucks.......................... 333
Cost of operation of horses................................... 325
Cost of operation of tractors.................................. 328
Comparison of costs of operating tractors mounted on
steel and on pneumatic tires ................................... 331
Factors influencing the life of tractors........................ 332
Units for comparing tractor costs............................. 328
Variation in costs of operating tractors....................... 328
Performances of tractors and horses in field work........... 350
Power and labor expended in production of corn and oats.... 354
Proportion of field operations performed by tractors and
by horses ......................................................... 351
Rates of performing field operations with tractors and
with horses ....................................................... 351
Power and labor costs on horse, standard tractor and gen­
eral-purpose tractor farms................................... 335
Horse costs ...................................................... 335
Influence of the number of productive livestock on man­
labor costs ...................................................... 339
Machinery costs .................................................. 336
Man-labor costs .................................................. 338
Total power and labor costs on horse, standard tractor
and general-purpose tractor farms after correction for
influence of variations in amounts of livestock............. 342
Tractor costs ...................................................... 337
Sources of data .................................................. 323
Summary .................................................................. 319
Types of power on cooperator farms............................. 323
Cox, Gertrude M., joint author of "Balanced incomplete block and
lattice square designs for testing yield differences among
large numbers of soybean varieties".............................. 289
Creaming qualities and volumes of lards and other fats........ 165
Relation of creamed volume to cake scores.................... 179
Relation of creamed volume to cake volume.................... 178
Some factors affecting creamed volume........................ 171
Creosote-kerosene (C.K.), use in control of European bindweed.. 410
Crop yields, as influenced by the type of power.............. 347
Crop yields, reduction from bindweed infestation .......... 421
Cultivation, value in control of European bindweed ......... 429
“Curing and storage of alfalfa hay,” by Edwin R. Henson ..... 1
Conclusions ............................................. 41
Discussion of methods of field curing .......................... 24
Experimental work on field curing .............................. 12
Factors influencing the quality of hay ......................... 22
Methods and materials for studying the rate of curing ....... 15
The function of alfalfa leaves during the curing process ..... 13
The time of day to cut alfalfa ................................ 12
Experimental work on storage of hay ........................... 26
Are there living cells in cured hay? ............................ 26
Baling alfalfa hay from the field .............................. 33
Discussion of hay storage results .............................. 37
Heating of hay in small containers ............................. 27
The storage of hay in experimental mows ....................... 28
Literature cited ........................................... 43
Review of previous work ..................................... 6
Summary .................................................. 3

Dairy Industry Section, bulletin from .......................... 217

E

Englehorn, A. J., joint author of “Yield tests and land valua-
tions” .................................................. 49
European bindweed, experiments on the control of .......... 365
European bindweed, root reserves in relation to control ...... 113
Examination of bacteria-free filtrates from butter cultures 235
“Experiments on the control of European bindweed (Convolu-
lus arvensis L.)” by A. L. Bakke ................................ 365
Botanical description ......................................... 372
Cultural practices ............................................ 421
Alfalfa ..................................................... 433
Alfalfa tolerant to sodium chlorate .............................. 435
Fallowing .................................................... 424
The effect of frequent cultivations begun in July up-
on subsequent crops ........................................ 429
Reduction in crop yields from bindweed infestation .......... 421
Use of competitive crops ...................................... 429
Development of bindweed ....................................... 373
Germination of bindweed seed .................................. 373
Mature plants ............................................... 374
Root system .................................................. 376
Seedlings .................................................... 373
Spread of bindweed seed ....................................... 377
Distribution .................................................. 371
Experimental work ............................................ 379
Ammonium thiocyanate ........................................ 403
Atlaclide solution .......................................... 394
Chemical treatments ........................................ 380
Chloron ..................................................... 418
Creosote-kerosene (C.K.) .................................... 410
Dry Atlaclide ............................................... 399
Dry sodium chlorate ......................................... 391
Fertilizer (Kainite) ......................................... 421
Other chemicals ............................................. 418
Potassium chlorate ........................................... 402

"Slow acid production by butter cultures" by F. E. Nelson, L. A. Harriman and B. W. Hammer.

Discussion of results

Experimental work

Effect of butter culture used as inoculating material on rate of acid production

Effect of milk used in making butter cultures on rate of acid production

Effect of milk contaminated from plant equipment

Effect of milk from various herds and individual cows

Effect of organisms present in raw milk

Studies of the ultrafilterable principle causing decreased acid production by butter cultures

Biological characteristics of the active principle in filtrates

Effect of physical and chemical factors on activity of inhibitory principle

Inhibition abilities of filtrates from various sources toward strains of S. lactis

Studies on sensitive and non-sensitive cultures of S. lactis

Historical

Bacteriophage active against Streptococcus lactis

Contaminating organisms

Effect of abnormal milk

Explosive type of outbreaks

Germicidal property of milk

General observations

Influence of the milk used

Literature cited

Smother cropping of bindweed, effect on root reserves

Smother crops, value in control of European bindweed

Sodium chlorate, use in control of European bindweed

Sodium chloride, use in control of European bindweed

Soil depth and slope, correlation with yield

Soil productivity ratings, compared with yield data

Spontaneous fires of hay

Statistical designs for testing yield differences among large numbers of soybean varieties

Balanced incomplete block

Lattice square

Statistical Section, bulletin from

Steel versus pneumatic tires for tractors

Storage of hay

Sugar reserves of bindweed roots

Sulfur, use in control of European bindweed

Sulfuric acid, use in control of European bindweed

Texture of fat as affecting cake quality

Tractors, cost of operating

Comparison of costs of operating tractors mounted on steel and on pneumatic tires

Factors influencing the life of tractors

Trucks, cost of operating
Types of power on farms, comparison of costs ........................................ 335
   Horse costs ........................................................................... 336
   Machinery costs ...................................................................... 337
   Tractor costs ........................................................................ 337
Types of power, relation to land use .................................................. 347

Ultrafilterable principle, effect on decreased acid production by butter cultures .................................................. 240

Weiss, Martin G., joint author of “Balanced incomplete block and lattice square designs for testing yield differences among large numbers of soybean varieties” ........................................ 289
