INDEX FOR BULLETINS 281-303

VOLUME XXV

A

Agricultural Economics Subsection, bulletin from. 317, 509, 773, 876. ..................................................... 1005
Agricultural Engineering Section, bulletin from ..................................................... 197
Agronomy Section, bulletin from ..................................................... 485
Alfalfa seedling infection. See “Influence of cultural factors on alfalfa seedling infection by Pythium debaryanum Hesse”... 669
“Analysis of lattice and triple lattice experiments in corn varietal tests,” by Gertrude M. Cox and Robert C. Eckhardt and W. G. Cochran ..................................................... 1
Lattice designs, construction and numerical analysis .................. 7
Lattice designs, mathematical theory ..................................................... 45
References cited ..................................................... 66
Triple lattice designs, construction and numerical analysis ........... 23
Triple lattice designs, mathematical theory ..................................................... 57
Anderson, R. L., joint author of “Tables of orthogonal polynomial values extended to N-104” ..................................................... 693
Animal Husbandry Section, bulletin from ..................................................... 797

B

“Bacteriology of cheese. V. Defects of blue (roquefort-type) cheese,” by H. W. Bryant and B. W. Hammer ..................................................... 109
Determination of moisture and salt ..................................................... 115
Determination of pH ..................................................... 115
Experimental results, blue cheese ..................................................... 115
Black discoloration ..................................................... 115
Gas formation ..................................................... 119
Gray discoloration ..................................................... 138
Lack of mold growth ..................................................... 133
Soft edge defect ..................................................... 124
Manufacture of blue cheese ..................................................... 113
Manufacture of cheddar cheese ..................................................... 114
Plating cheese ..................................................... 114
Preparation of mold powder ..................................................... 115
“Bacteriology of cheese. VI. Relationship of fat hydrolysis to the ripening of cheddar cheese,” by C. B. Lane and B. W. Hammer ..................................................... 449
Discussion ..................................................... 467
General historical ..................................................... 454
General methods ..................................................... 454
Examination and scoring ..................................................... 455
Manufacture ..................................................... 454
Nitrogenous decomposition ..................................................... 455
Literature cited ..................................................... 484
Results obtained ..................................................... 456
Part I, effect of homogenizing ..................................................... 456
Part II, effects of lipolytic enzymes ..................................................... 459
Tables ..................................................... 469
Barley. See “Pythium Graminicola Subr. on barley” ..................................................... 285
Bird, E. W., joint author of “The quality of butter made from vacuum-pasteurized and vat-pasteurized lots of the same creams” ..................................................... 149
Botany and Plant Pathology Section, bulletin from. 285, 573, 669
Bridgman, Charles T., joint author of “Precast tile beam floor” ..................................................... 197
Brown, E. O., joint author of “The viability and germination of seeds of Convolvulus arvensis L. and other perennial weeds”. 573
Brownlee, O. H., joint author of “Effects of crop acreage control features of AAA on feed production in 11 Midwest states”. 773
Bryant, H. W., joint author of “Bacteriology of cheese. V. Defects of blue (roquefort-type) cheese”. 109
Buchholtz, W. F., author of “Influence of cultural factors on alfalfa seedling infection by Pythium debaryanum Hesse”. 669
Butter. See “Diacetyl and acetylmethylcarbinol production in the manufacture of unsalted butter”. 925
Butter, flavor development. 417
Butter, quality of. 149

Cheeddar cheese. See “Bacteriology of cheese. VI. Relationship of fat hydrolysis to the ripening of cheddar cheese”. 449
Cheese. See “Bacteriology of cheese”. 449
“Classification of the organisms important in dairy products. III. Pseudomonas putrefaciens,” by H. F. Long and B. W. Hammer. 173
Discussion of results. 193
Experimental. 178
Development of an isolation technic for Ps. putrefaciens. 178
Distribution of Ps. putrefaciens. 183
General description of Ps. putrefaciens. 191
Variation in Ps. putrefaciens. 189
Literature cited. 195
Summary. 176

Cochran, W. G., joint author of “The analysis of lattice and triple lattice experiments in corn varietal tests”. 1
Cochran, W. G., author of “An examination of the accuracy of lattice and lattice square experiments on corn”. 397
Convolvulus arvensis L. See “Viability and germination of seeds of Convolvulus arvensis L. and other perennial weeds”. 573
Corn. See “An examination of the accuracy of lattice and lattice square experiments on corn”. 397
Corn, transmission tests of. 485
Corn yield. See “Methods of computing a regression of yield on weather”. 961
Cox, Gertrude M., joint author of “The analysis of lattice and triple lattice experiments in corn varietal tests”. 1

Dairy Industry Section, bulletin from. 109, 149, 173, 417, 449, 925
Dairy products. See “Classification of the organisms important in dairy products. III. Pseudomonas putrefaciens”. 173
“Diacetyl and acetylmethylcarbinol production in the manufacture of unsalted butter,” by T. I. Hedrick and B. W. Hammer. 925
Analytical methods. 933
Discussion. 947
Experimental. 933
Changes. 945
Effect of various ripening procedures. 939
Effects of various factors. 933
Ratios. 943
Historical. 930
Introduction. 929
Literature cited. 949
Summary. 928
Tables. 950
Eckhardt, Robert C., joint author of "The analysis of lattice and triple lattice experiments in corn varietal tests". 1

"Effects of crop acreage control features of AAA on feed production in 11 Midwest states," by T. W. Schultz and O. H. Brownlee 773

Comparative statistics 778
Aggregate feed production 778
Concentrate feeds 786
Central Corn Belt states 786
"Drouth" states 787
Midwest 788
Northern Lake States 786
Corn 782
Central Corn Belt states 782
"Drouth" states 783
Northern Lake states 783
Summary 783
Feed roughages 788
Central Corn Belt states 789
"Drouth" states 789
Midwest 791
Northern Lake states 789
Introduction 775

Eggs. See "Poultry products research. A guide for research workers, including a list of some problems in project form". 797

"Estimation of income tax revenue and incidence," by Clifford G. Hildreth 876

Description of the method 883
Deductions 897
Earned income credit 897
Exemptions 901
Imputed incomes 893
Results 903
Understatement 889
Examination of the method 909
Averaging 912
Inflating the 1935-36 distribution 909
Loss of surtax associated with high normal tax rates 914
Nonreporting 913
Historical test of the method 919
Normal tax revenue 919
For 1934 919
For 1935 920
For 1936 920
For 1937 921
For 1938 921
For 1939 922
Introduction 883
Summary 879

"Examination of the accuracy of lattice and lattice square experiments on corn," by W. G. Cochran 397

Appendix 414
Examination of standard errors 410
Introduction 401
Lattice square designs with oblong plots 412
Material 402
Method of calculating relative accuracy 405
References cited 415
Hoecker, W. H., joint author of “Flavor development in salted butter by pure cultures of bacteria” .......................... 417
Home Economics Section, bulletin from .................................. 69
Horticulture Section, bulletin from ........................................ 605
Household Equipment Subsection, bulletin from ....................... 69
Huseman, E. E., author of “Methods of computing a regression of yield on weather” ............................................. 961
Huseman, E. E., joint author of “Tables of orthogonal polynomial values extended to N=104” .................................. 693

I

Income tax. See “Estimation of income tax revenue and incidence” ................................................................. 876
Incomes. See “Incoming and outgoing payments of Iowa farm families” ............................................................. 509
“Incoming and outgoing payments of Iowa farm families,” by Lawrence Witt ......................................................... 509
Appendix ............................................................................. 564
General summary ................................................................ 515
Introduction ........................................................................ 513
Literature cited .................................................................... 561
Presentation of estimates ....................................................... 518
Incoming payments ............................................................. 518
Outgoing payments ............................................................. 521
Summary ............................................................................ 512
Summary and conclusions .................................................... 557

“Influence of cultural factors on alfalfa seedling infection by Pythium debaryanum Hesse,” by W. F. Buchholtz .................. 669
Damping-off symptoms ....................................................... 675
Germinating seed ................................................................ 675
Older plants ....................................................................... 676
Seedlings ........................................................................... 675

introduction ........................................................................ 673
Literature cited .................................................................... 692
Pathogenicity of Pythium debaryanum to alfalfa ................... 680
Alfalfa stands from two broadcast plantings ....................... 691
Damping-off of seedlings ..................................................... 684
At different depths ............................................................. 684
In soil samples ................................................................... 680
On limed and unlimed soils .................................................. 683
Field results ........................................................................ 687
Seed treatment .................................................................... 686
Summary ............................................................................ 672
The casual agent .................................................................. 676

L

Lane, C. B., joint author of “Bacteriology of cheese. VI. Relationship of fat hydrolysis to the ripening of cheddar cheese” ...... 449
Long, H. F., joint author of “Classification of the organisms important in dairy products. III. Pseudomonas putrefaciens” ...... 173

M

Madden, Faith, joint author of “Performance of electric roasters” 69
Maney, T. J., joint author of “Strawberry production in southeastern Iowa as influenced by varieties, fertilizers and cultural practices” ................................................................. 605
Meilhus, I. E., joint author of “Pythium graminicola Subr. on barley” ................................................................. 185
Meredith, C. H., joint author of “Pythium graminicola Subr. on barley” ........................................................... 185

“Methods of computing a regression of yield on weather,” by E. E. Houseman .......................................................... 961
Appendix I ........................................................................ 1001
Appendix II ........................................................................ 1003
Introduction ...................................................................... 963
Literature cited .................................................................. 984
Regression of corn yield on basis of rainfall ......................... 964
Regression of yield on two weather factors ......................... 976
Tables .............................................................................. 985

Minges, Philip, joint author of “Strawberry Production in southeastern Iowa as influenced by varieties, fertilizers and cultural practices” .............................................................. 505

P

Peet, Louise J., joint author of “Performance of electric roasters” 69
“Performance of electric roasters,” by Faith Madden and Louise J. Peet .............................................................. 69
Accuracy of thermostat control ........................................... 89
Electrical energy necessary to maintain certain interior tempera-
tures ............................................................................. 83
Food tests ......................................................................... 103
General method of procedure .............................................. 79
Heat distribution as indicated by temperatures ....................... 94
Heat retention or rate of cooling as indicated by temperature change ................................................................. 90
Influence of utensils on heat utilization ................................. 100
Preheat performance .......................................................... 81
Roasters used ..................................................................... 77
Surface temperatures ........................................................ 95
Temperature drop when lid is raised ..................................... 97

Pickett, B. S., joint author of “Strawberry production in southeastern Iowa as influenced by varieties, fertilizers and cultural prac-
tices” ............................................................................ 605

Pomology Subsection, bulletin from ...................................... 605

Porter, R. H., joint author of “The viability and germination of seeds of Convolutus arvensis L. and other perennial weeds” 573

Poultry Husbandry Subsection, bulletin from ...................... 797

“Poultry products research. A guide for research workers, including a list of some problems in project form,” edited by George F. Stewart .............................................................. 797

Outlines for poultry products research .................................. 810

Egg research ................................................................. 811
Frozen and dried eggs ........................................................ 812, 822, 830, 831, 832, 834
Grading eggs ...................................................................... 811, 816, 819
Keeping quality of eggs ...................................................... 817, 820, 821
Nutritive value of eggs ...................................................... 837, 838, 840, 841, 842
Uses for eggs ..................................................................... 811, 814, 822, 823, 824, 826, 827, 828

Poultry research .............................................................. 843
By products ...................................................................... 870, 871, 872, 872, 873
Poultry keeping quality ...................................................... 862, 863, 864, 865, 866, 868, 869
Production for market purpose ........................................... 845, 846, 847, 848, 849, 850, 851, 852, 853, 855, 856, 857, 858, 859, 860

Contributors ..................................................................... 799
Scope and purpose .......................................................... 809

“Precast tile beam floor,” by Henry Giese and Charles T. Bridg-
man .............................................................................. 197
Spaulding, J. Lloyd, author of “Farm taxes and the cost of public services in relation to land resources in Ringgold county, Iowa” 317
Sprague, G. F., author of “Transmission tests of maize mutants induced by ultra violet radiation” 485
Statistical Section, bulletin from 1, 397, 693, 961
Stewart, George F., editor of “Poultry products research. A guide for research workers, including a list of some problems in project form” 797
Strand, Norman V., author of “Prices of farm products in Iowa, 1851-1940” 1005
“Strawberry production in southeastern Iowa as influenced by varieties, fertilizers and cultural practices,” by Philip Minges, T. J. Maney and B. S. Pickett 605
Conclusions 660
From cultural tests 642
From fertilizer studies 656
From variety trials 636
Discussion 640
Of cultural tests 640
Of fertilizer results 651
Of variety trials 632
Experimental 618
Later experiments 619
Plan of investigation 618
General discussion 656
Introduction 609
Literature cited 662
Literature review 610
Methods and materials 623
Presentation of fertilizer results 642
Results of the cultural tests 636
Results of the varietal tests 625
Soil type and conditions 622
Statistical treatment of the results 625
Weather conditions 625

“Tables of orthogonal polynomial values extended to N = 104,” by R. L. Anderson and E. E. Houseman 693
Methods of calculation and use 695
A comparison of available methods of calculation 696
Introduction 695
Tabulation of the $\xi'$ values 708
The fitting of polynomials by the $\xi'$ method 700
The $\xi'$ method 697
References cited 709
Tables 710

Taxes. See “Farm taxes and the cost of public services in relation to land resources in Ringgold county, Iowa” 317
Tile floor. See “Precast tile beam floor” 197
“Transmission tests of maize mutants induced by ultra-violet radiation,” by G. F. Sprague 485
Concomitant derangements 500
Description of mutants 489
Discussion 503
F$_2$ transmission tests 495
Introduction 489
Literature cited 507
Male and female transmission tests ........................................ 498
Summary .............................................................................. 489

U

Ultra violet. See “Transmission tests of maize mutants induced by ultra violet radiation” ................................................. 485

V

“Viability and germination of seeds of Convolvulus arvensis L and other perennial weeds,” by E. O. Brown and R. H. Porter ...... 573

Experimental results .......................................................... 578
Cardinal temperatures for germination .................................. 585
Degree of impermeability in seeds ........................................ 587
Development of seeds of Convolvulus arvensis .................... 582
Different seasons of growth .................................................. 582
Establishment and growth of seedlings ............................... 603
Germination of bindweed .................................................... 580
Horse nettle seeds, germination ............................................. 591
H₂SO₄ affecting seeds .......................................................... 587
Immersing seeds in water .................................................... 588
Leafy spurge, germination .................................................... 595
Longevity of seeds .............................................................. 598
Pepper cress seeds, germination .......................................... 594
Russian knapweed, germination .......................................... 595
Seed production by bindweed .............................................. 578
Temperature and moisture affecting seeds ......................... 587

Literature cited .................................................................... 604
Materials and methods ........................................................ 577
Summary .............................................................................. 575

W

Witt, Lawrence, author of “Incoming and outgoing payments of Iowa farm families” ......................................................... 509
Work Projects Administration, bulletin from ......................... 1005
