In those areas where swine erysipelas has been a serious problem during the past several years, practicing veterinarians and investigators have recognized

**Anti-Swine Erysipelas Serum**

(*Lockhart*)

as the leader in its field, because its potency was thoroughly established and voluntarily maintained long before compulsory standards became effective. It has stood the test of years of successful field use in those districts where swine erysipelas is most virulent.

**ASHE LOCKHART, INC.**

"Producers of Better Biologicals for Graduate Veterinarians"

Quiz for Veterinarians on Hog Cholera control. Do you know all the answers?

QUESTION: What method of Hog Cholera control can rule out “home-vaccinating”?

ANSWER: Cutter B-T-V — and only B-T-V!

1 QUESTION: Is there any real hope for wiping out cholera, which each year robs hog raisers of close to five million dollars?

ANSWER: Yes, by destroying the cholera virus. Cutter B-T-V and Crystal Violet eliminate the use of live virus, keep premises clean.

2 QUESTION: What method of control is most convenient for both veterinarian and hog raiser?

ANSWER: Facts favor B-T-V. You can vaccinate part of a herd without endangering the rest, at your own convenience.

3 QUESTION: Are post vaccination reactions and “vaccination stunting” inevitable evils?

ANSWER: Definitely not. Following B-T-V, pigs don’t go off feed. Hence, they gain and reach market faster!

4 QUESTION: What is Cutter’s answer when farmers ask for prices and instructions on using B-T-V?

ANSWER: “See your veterinarian” is Cutter’s firm answer. That’s what makes B-T-V strictly the “veterinarian’s product.” If you don’t have all the facts, send us your name.
